

# Technology jokes: The world's most solid firewall

A current genetic study shows that there are some special correlations between sperm and large-scale DDOS attacks that we may laugh at.

A current genetic study shows that there are some special correlations between sperm and large-scale DDOS attacks that we may laugh at.

The operation of the firewall system of technology compared to natural firewalls.

A cell nucleus contains the amount of genetic information equivalent to 75MB of data.

A sperm contains half of that, which means 37.5MB.

One ml of semen contains an average of 100,000,000 sperm.

Normally, the ejaculation lasts for 5 seconds and produces 2.25 ml of semen.

That means the flow through a man's genitalia equals  $(37.5 \text{ MB} \times 100,000,000 \times 2.25) / 5 = 1\,687\,500\,000\,000\,000\,000 \text{ bytes} / \text{sec} = 1.6875 \text{ TB} / \text{sec}$ .

This means that a woman's egg cell must resist DDoS attack at 1.5 terabytes per second, and only allow through one (!) Packet, which is the best hardware firewall in the world!

The downside is that only with a small data packet that it allows through, the system always 9 months!

## Lag

During a computer exam at a high school, the superintendent caught sight of a student holding a "buoy".

- "What are you doing?"

Caught in the act, the student stammered:

- "Yes . sir, I am . accessing the information".

Confiscating the buoy, the superintendent made a record while saying:

- "That's a shame! Poor me, the internet is congested and my device is hanging."

Collect.
