

Telegram allows you to delete a received message from the sender's device

In a move that is supposed to increase user privacy, Telegram recently announced that it has added a new feature that allows users to delete any messages in a private conversation (a - one).

In a move that is supposed to increase user privacy, Telegram recently announced that it has added a new feature that allows users to delete any messages in a private conversation (a - one), and also allow the deletion of that message from both the recipient's and sender's devices at the same time.

1. Facebook collapsed globally, Telegram has more than 3 million new users subscribed to the service

When Telegram first introduced the "unsend" feature, users can delete any messages they sent within the last 48 hours from both devices. And this time, for more secure protection for users' privacy, Telegram now allows you to delete any message, regardless of how long it was sent during a live chat and deleted. it leaves the device of the sender and the receiver.

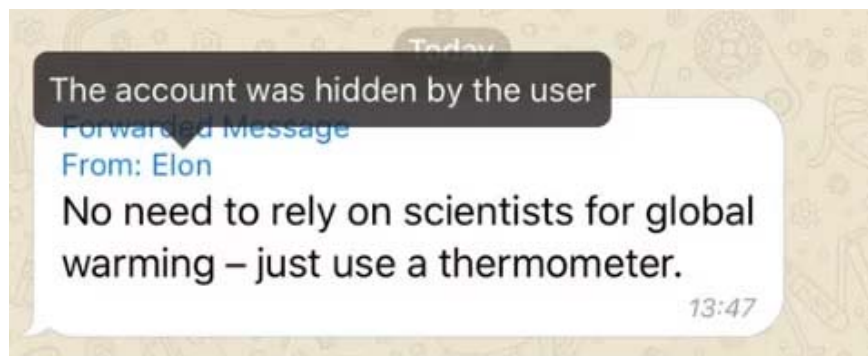

To use this feature, simply press and hold a message until the Delete option appears. When clicking on the Delete option, you will be asked if you want to delete the message from your own conversation or on both devices. Telegram made an official announcement in a blog post as follows:

"We are increasingly working on user privacy issues, and currently, Telegram is giving hundreds of millions of users full control over any conversation. Any privacy they have ever done You can now choose to delete any messages you have sent or received from both sides of the device sent and received in any private conversation. on both your account, your device and the recipient's - there is absolutely no trace left. "

1. Surprise: Google Docs editing tool is the most popular messaging app for American teenagers

In addition, to enhance security, Telegram also introduced the anonymous send feature, removing the link back to the original account profile of a forwarded message. This feature helps to disable any verifiable method that shows a forwarded message from a particular account.

1. Facebook Messenger adds a citation response feature, adding a step forward in integrating messaging services

Other new features announced by Telegram today include new install and emoticon search fields, and VoiceOver on iOS and TalkBack on Android accessibility gadgets, promising to bring a user experience. much better.
