

'Terrible' fire sprinkler gun penetrates concrete walls, iron doors

This device greatly reduces the risk of a backdoor phenomenon, the fire suddenly bursts and causes a big explosion when opening the door, breaking the wall ... causing sudden air contact with the fire.

PyroLance firearms, ultra-high pressure water sprayers can penetrate concrete and metal. After that, it will spray water through the newly created small hole to put out the fire and cool it inside to improve the fire-fighting ability, especially in hard-to-reach fires and ensure firefighters' safety.

1. Ultra-durable protective gloves: combustion does not burn, knives do not break and withstand strong impact
2. This is why touching a 200,000V electric ball without shocking and putting a hand into the 120V electric drive is dead

This device greatly reduces the risk of a backdoor phenomenon, the fire suddenly bursts and causes a big explosion when opening the door, breaking the wall . causing sudden air contact with the fire.

This is a device developed by Pyrolance company, based in Florida, USA.
