>>>Ultra-thin MacBook Air laptop can be scaled

The Macbook Air will launch next week.

Rumors of a new version of the Macbook Air with an 11.6-inch screen are not new at this time. However, when Apple's " **Back to the Mac** " event is about to take place next week, details about the configuration, the price of the device begin to be confirmed by major technology sites.

AppleInsider claims, Macbook Air will be present at the event on October 20. It will use a solid-state storage drive called " *SSD Card* " with a size of just one RAM. This undoubtedly allows the Macbook Air 11.6 inches to increase the thinness without reducing the power of the machine.

Meanwhile, *Cnet* magazine said, the new version will cost significantly less than before, starting at \$ 1,499. At this price, it can still use Core 2 Duo or Core i processors and Nvidia graphics chips.
