

The 20-year-old boy is named in the Hall of Fame list of Google

Recently, a new member was named in the Hall of Fame list of Google. This guy was listed on the 49th page of a total of 89 pages of Hall of Fame.

Technology giants like Google, Facebook and Microsoft all have bug bounty programs, in which many security researchers have been rewarded for discovering new product or system errors.

Last year, Google announced how hackers were awarded \$ 3 million. And a few days ago, a student in Uruguay was rewarded with \$ 10,000 after he discovered a gap in Google.

Hariprasad is a third-year computer engineering student at the National Polytechnic College. He is a curious and highly educated guy. He likes to spend time on the Internet after exhausting lessons and research some technical knowledge. It was this passion that earned him the honor on the 49th page of the 89-page Hall of Fame list after finding a bug in Google's sub-domain.

Hall Of Fame List

Computer engineering is Hariprasad's passion and he is happy to receive Google's notification email.

Hopefully this guy will achieve more success in the future.
