

The \$ 5 million supercar is capable of hacking iPhone and Android smartphones from a distance of 500 meters

The SpearHead 360 car is equipped with a new generation of reconnaissance tools with 24 antennas to help it reach the target device. After identifying the target, this system has 4 different ways to force your device to connect to its wifi and then proceed to attack.

The car has the ability to hack (jailbreak) both iPhone and Android smartphones from this distance up to 500 meters called SpearHead 360. This is the brainchild of Israeli cyber security expert Tal Dilian, who specializes in creating high-tech products and is being sold by the company called WiSpear of Israel for 3.5 - 5 million USD.

The SpearHead 360 car is equipped with a new generation of reconnaissance tools with 24 antennas to help it reach the target device. After identifying the target, this system has 4 different ways to force your device to connect to its wifi and then proceed to attack.

In addition, SpearHead 360 is also equipped with 4 different types of malicious code to be able to infect all kinds of popular operating systems, including Apple's iOS and Google's Android.

The problem is that the SpearHead 360 can simultaneously unlock many devices. For example, it can attack at the same time a Mac computer, an Android phone and a Windows tablet when all of these targets are within its 500m radius.

The customer object that WiSpear is targeting is the authorities or the police force. Meanwhile, the SpearHead 360 will be used for the purpose of infiltrating criminals' mobile devices from long distances to monitor their activity.

Privacy advocates have criticized and expressed concern about potential consequences when such a powerful reconnaissance system is installed in cars and can serve purposes. not transparent.

The SpearHead 360 is currently on display at the Eurosatory defense technology exhibition, taking place in France. When buying a car, customers will be accompanied by accessories including an unmanned drone and a backpack (worth \$ 1.2 million) that also has the ability to perform similar attacks.
