Network security is constantly changing

Information technology in general and cybersecurity in particular are areas of continuous development and contain many unpredictable changes. In the context of artificial intelligence technology (AI) and especially machine learning (ML) is growing as a present, a new wave of progress, has a profound influence in the entire information technology industry will soon appeared. However, along with the emergence of new technology waves will be unknown threats, and cybersecurity events are the place where all humanity get more information about the clues. Unpredictable hazards may be imminent

If you are a cyber security expert or simply a person with a passion for cyber security, don't miss the information from the 5 most important security conferences in the world below. All will help you gain new and extremely necessary insights about one of the fastest growing areas in the world.

1. The cybersecurity tools that every business should know

Important network security conferences

1. Cyber ??Security Summit (Network security summit)
2. BSides security conference
3. Data Connectors
4. SecureCISO
5. Black Hat

Cyber ??Security Summit (Network security summit)

Cyber ??Security Summit Vietnam 2019

Cyber ??Security Summit is one of the big security conferences that brings together the participation of win-win executives from many leading technology companies in the world, as well as the indispensable contribution of security providers. Network to talk about the latest attacks, has caused damage in many areas around the world.

From simple scams to comprehensive corporate espionage tactics, industry-leading experts will show businesses how to practice cyber security, as well as how to get them can better protect your digital asset warehouse.

International network security summit is usually held in some US cities. In addition, countries also organize their own network security summits.

Under the auspices of the Ministry of Information and Communications and the professional direction plan from the Information Security Department, Vietnam Internet Association has collaborated with the IEC Group to successfully organize the International Conference & Exhibition on An. Vietnam Security Summit 2019, took place on April 16 and 17 last at Melia Hotel Hanoi, with numerous urgent issues raised as well as resolved.

1. What do you know about the first 'cyber attack' in the world?

BSides security conference

Open and friendly space at BSides

If you are looking for an event that will help you connect with the leading cyber security community in the United States, as well as some other information technology 'powers', BSides is the name you should let eyes coming. Security BSides (commonly referred to as BSides) is a series of information security conferences, founded by three famous security experts: Mike Dahn, Jack Daniel and Chris Nickerson in 2009. Also one of the world's largest cyber security events planned, funded and hosted by the community.

Within BSides, participants will have the opportunity to connect with peer-to-peer network security experts and white-hat hackers to exchange ideas and discuss issues that everyone cares about. in an open and friendly space. BSides are often structured according to the traditional conferencing model and take place in parallel with other 'mainstream' security conferences such as Black Hat, RSA .

BSides events will be held in Vancouver, Amsterdam, Chicago and some other US cities throughout the year.

1. The alarming increase in the number of attacks targeted at IoT devices

Data Connectors

Data connectors are organized throughout the year

Data connectors are one of the few CPE-based network security events, and a 'non-participating' security event for those who want to maintain their CISSP certification. CISSP is one of the recognized high-end security certificates worldwide, certified by an independent organization ISC2. There are over 63,000 people with CISSP certification in 134 countries around the world. To be eligible for this certificate, applicants must have at least 5 years of full-time work experience in at least 2 fields in CBK or 4 years of experience on at least two CBK domains, and of course must have a degree University.

In Data connectors framework, it often preserves educational seminars related to the latest network security services and possesses the best practices in the industry. This is also one of the most suitable network security events if you want to find and connect to networks with fellow professionals. Data connectors are organized in many major cities in the United States and Canada throughout the year.

1. There were 12,449 serious data breaches recorded in 2018, an increase of 424% compared to 2017

SecureCISO

SecureCISO with the participation of leading industry experts

Understanding the real situation of the growing IT world as well as the constantly changing cyber security sector is almost impossible if you cannot find the sources of information that the system is full of. Enough and intuitive from leading experts. That's why IT security business leaders and top security experts are sitting together every year, on SecureCISO's stage, to talk about love. Current image as well as future orientation of the technology world.

Individuals attending this network security conference will get the latest insights on all issues related to enterprise-level information technology security. In addition, they will also have the opportunity to listen to top speakers talking about topics that stimulate thinking in the industry, and provide in-depth predictions about how industry is important. How will this world change.

1. McAfee expert explained how deepfake and AI are drilling through the cyber security wall

Black Hat

Black Hat - events not to be missed

Black Hat is a highly specialized series of information security conferences. The reason for this is an event not to be missed because it brings together the participation of top leaders from all aspects of information security, from corporations and companies to learn, collaborate, even underground security researchers. In addition, this cyber security event offers a wide range of training courses, from simple hacking tips to professional 'black hat' techniques.

Overall, Black Hat is a neutral environment in sharing practical, timely and useful knowledge, and it is the largest and best event in the field of information security, capable of pointing out Information security orientation in the near future. Network security experts as well as 'newly-employed' white-hat hackers should not miss this big information technology event, because it will bring high-value knowledge of the latest hacking techniques and ways. protect against them.

As mentioned, the development of the technology world will always be reflected most clearly and clearly through the actual image of the field of network security. The need for in-depth network security conferences will be even more important in the future, helping network security professionals and the entire community keep up with the most transformative industry changes in the world. this.
