

# The 5G network in Korea is capable of downloading 800MB of data in 1 second

The 4G LTE-Advanced 3-band network has not yet been officially launched, but South Korea has considered widening the road for 5G.

**The 4G LTE-Advanced 3-band network has not yet been officially launched, but South Korea has considered widening the road for 5G.**

The 5G network will expand its road in Korea by 2020

According to Yonhap News, South Korea's National Information Technology Ministry decided to spend 1.6 trillion won ( \$ 1.5 billion ) and will work with local operators to equip **5G technology for people. Korean people** are 1,000 times faster than current 4G services.

Accordingly, 5G network technology allows you to download a 800 MB movie only 1 second only, while 4G LTE-Advanced technology is launched by 2 operators *SK Telecom and LG U Plus* last year. takes up to 40 seconds (*theoretical speed*) .

5G service will also allow high-speed train passengers with speeds of more than 500 km / h to access the network. It is expected that the 5G service trial will begin in 2017 and put into commercial exploitation in the domestic market in 2020.
