

The amount of smartphones will increase 10 times in 2019

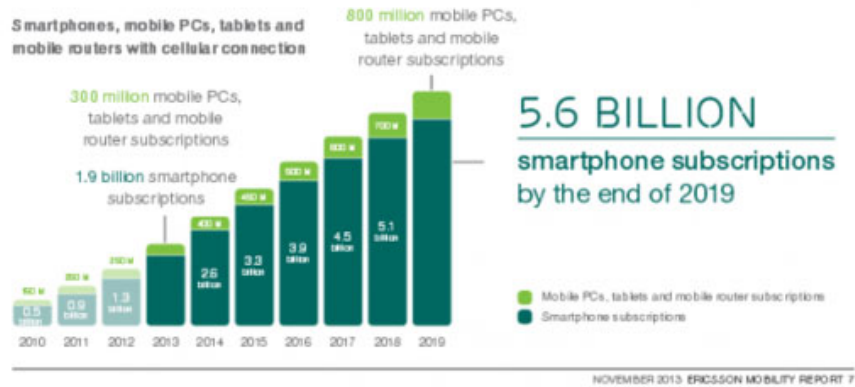

According to Ericsson, it takes 5 years for the new smartphone market to reach 1 billion customers globally (2007-2012), but it will only take two years to reach 2 billion customers (2014), and another 5 years more users. smartphone reached 5.6 billion (2019).

According to Ericsson, it takes 5 years for the new smartphone market to reach 1 billion customers globally (2007-2012), but it will only take two years to reach 2 billion customers (2014), and another 5 years more users smartphone reached 5.6 billion (2019).

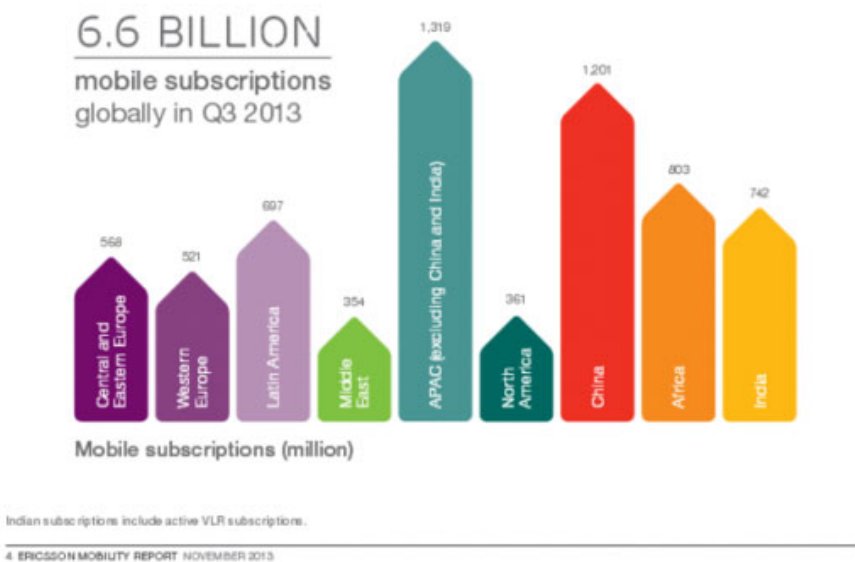

Notably, the number of smartphones will account for 60% of the 9.3 billion mobile devices circulated in 2019.

According to *Ericsson* 's report, data traffic from smartphones at that time will increase 10 times compared to today. The increase in smartphone traffic will make smartphone sales tripled by 2019. China will be the " *promised land* " for smartphones in the future. It is an emerging market with high demand for low-end and mid-range smartphones.

50% of data traffic in 2019 will be video, only 10% will be connected to social networks and web services. WCDMA / HSPA networks will account for 90% of traffic and LTE networks will reach 65%.

The report also assesses the negative impacts of smartphones in cities, where demand is highest, congestion will be the most common phenomenon.
