

# The app replaces Android physical Home button

Applications that replace the Home button, which is broken on the phone, will create a virtual Home button, enabling users to use the device quickly.

Some devices after using time will have a damaged Home button, there is no response when clicked. On the iPhone if the physical Home button has a problem, you can use the virtual Home button instead. But with Android devices, we will need to use applications that create virtual Home buttons on the phone. In case the physical Home button has a problem, the user will switch to the virtual Home button, which can still ensure the operation on the phone. The following article will summarize some applications to create virtual Home button on Android.

1. Turn the Home button on Android into the "divine" Home button
2. 4 customizations to optimize virtual Home button on iPhone, iPad
3. Things you don't know that the iPhone's Home key can do

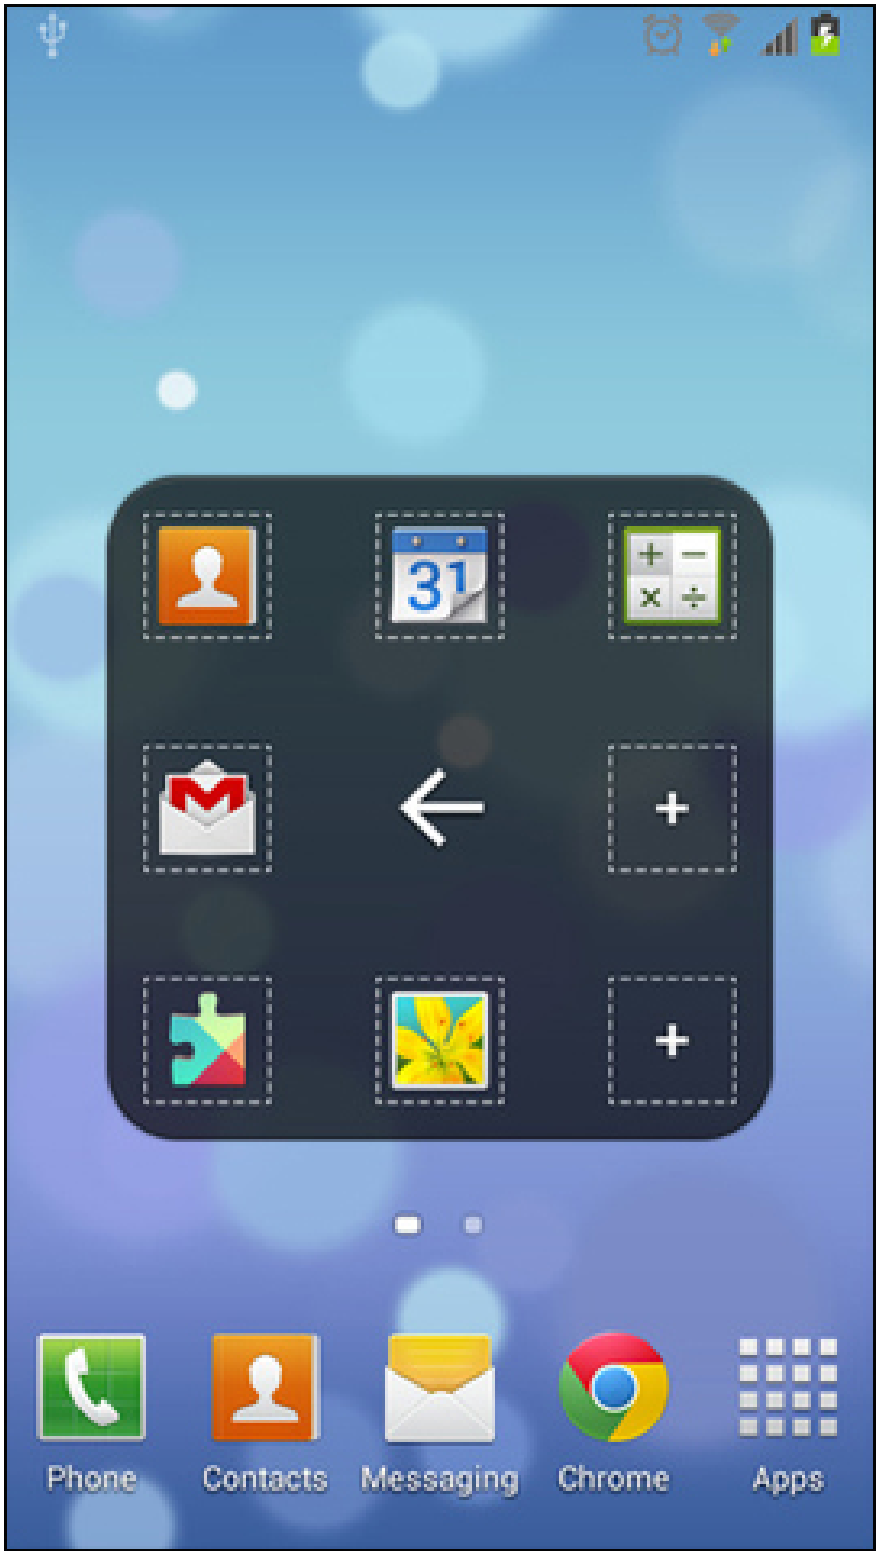

## Applications create virtual Home button on Android

### 1. Easy Touch application

1. Download the Easy Touch app

Easy Touch will create a virtual Home button on the phone screen with many other options for the virtual Home button menu. The application will create 2 control panels for the virtual Home button when displayed on the screen. Then select which applications or settings will display in the control panel. So just press once on the virtual Home key you can adjust or access the entire system.

How to use Easy Touch application on Android refer to details in How to create Virtual Home key on Android phone.

# Support Long Press Action

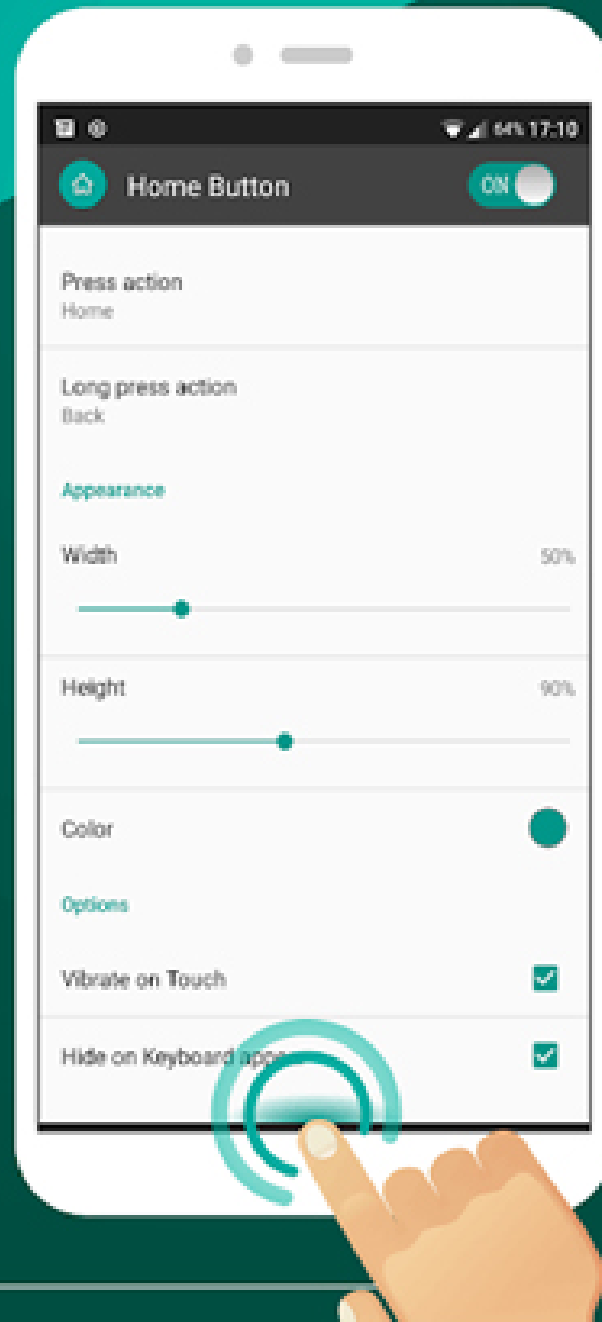

## 4. Home Button application

1. Download the Home Button application

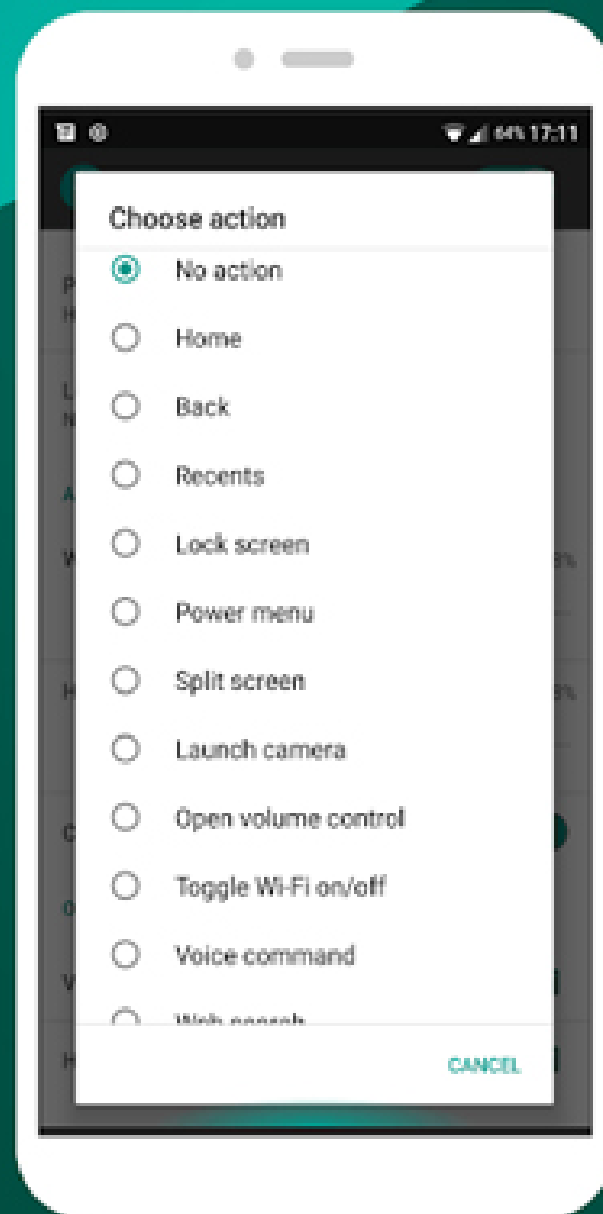

The traditional physical home button will be replaced by a color-designed wiper stick of your own design. You can adjust the bold or blurred display for that control bar. Just swipe up to go back to the main screen.

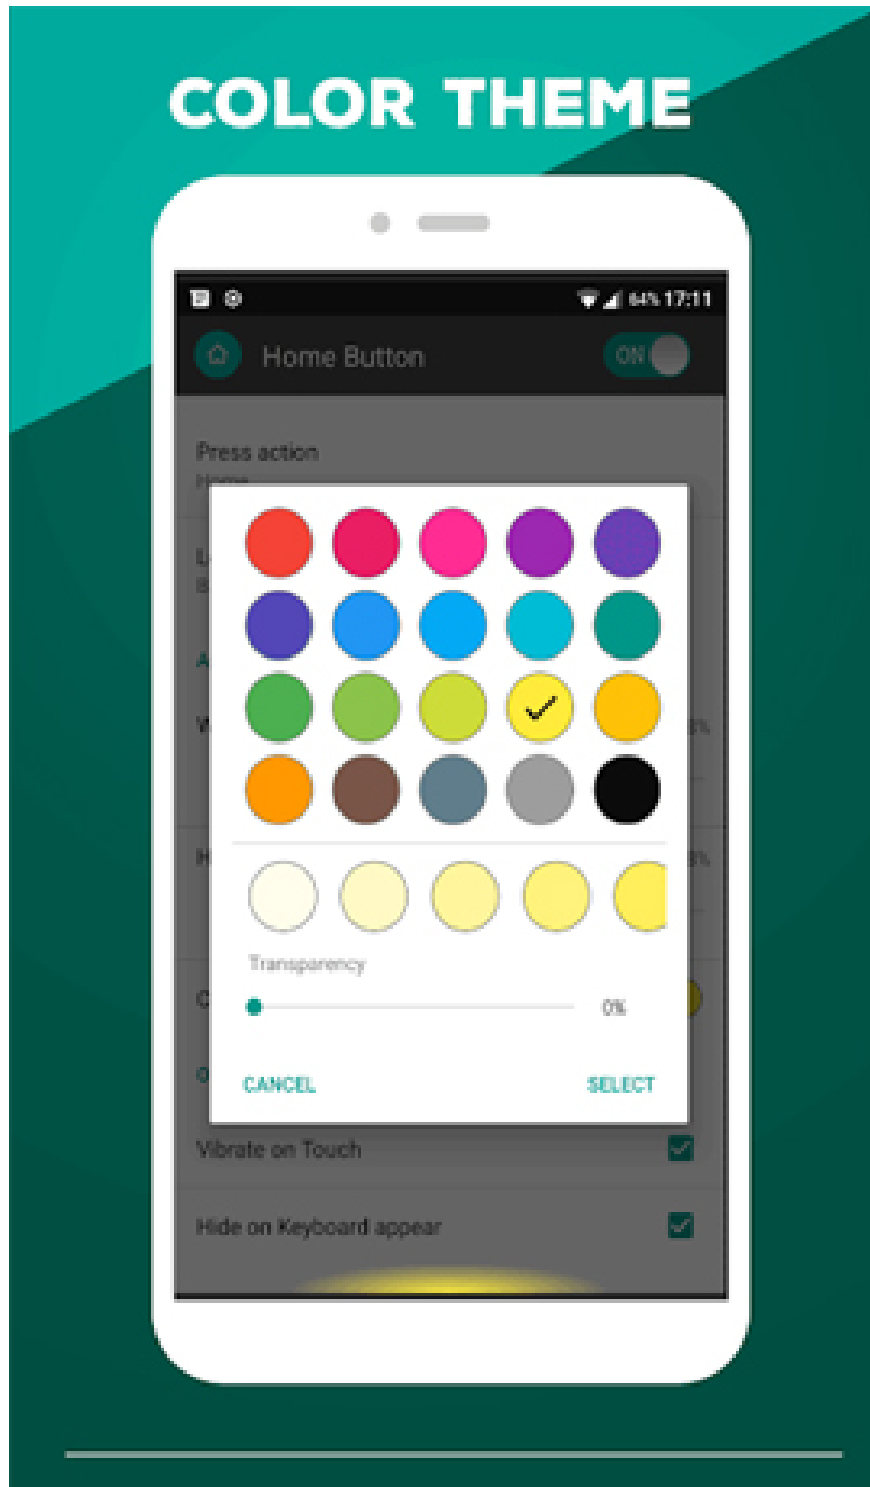

Home Button will add the custom feature of the swipe bar like Back, Recent Button.

# EASY TO USE

# MULTIPLE ACTIONS

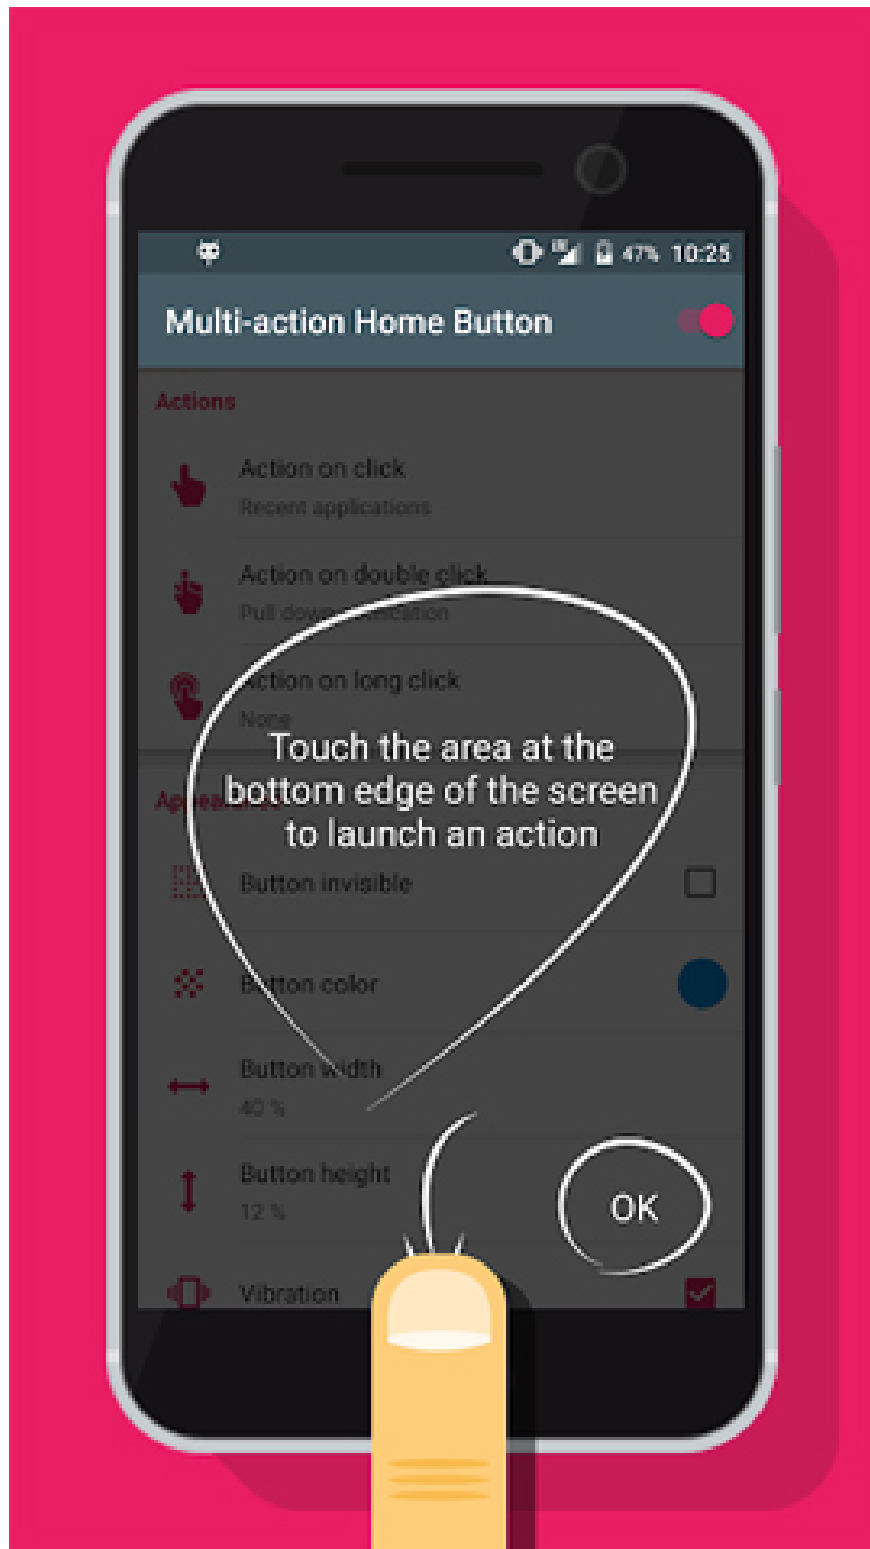

## 5. Multi-Action Home Button application

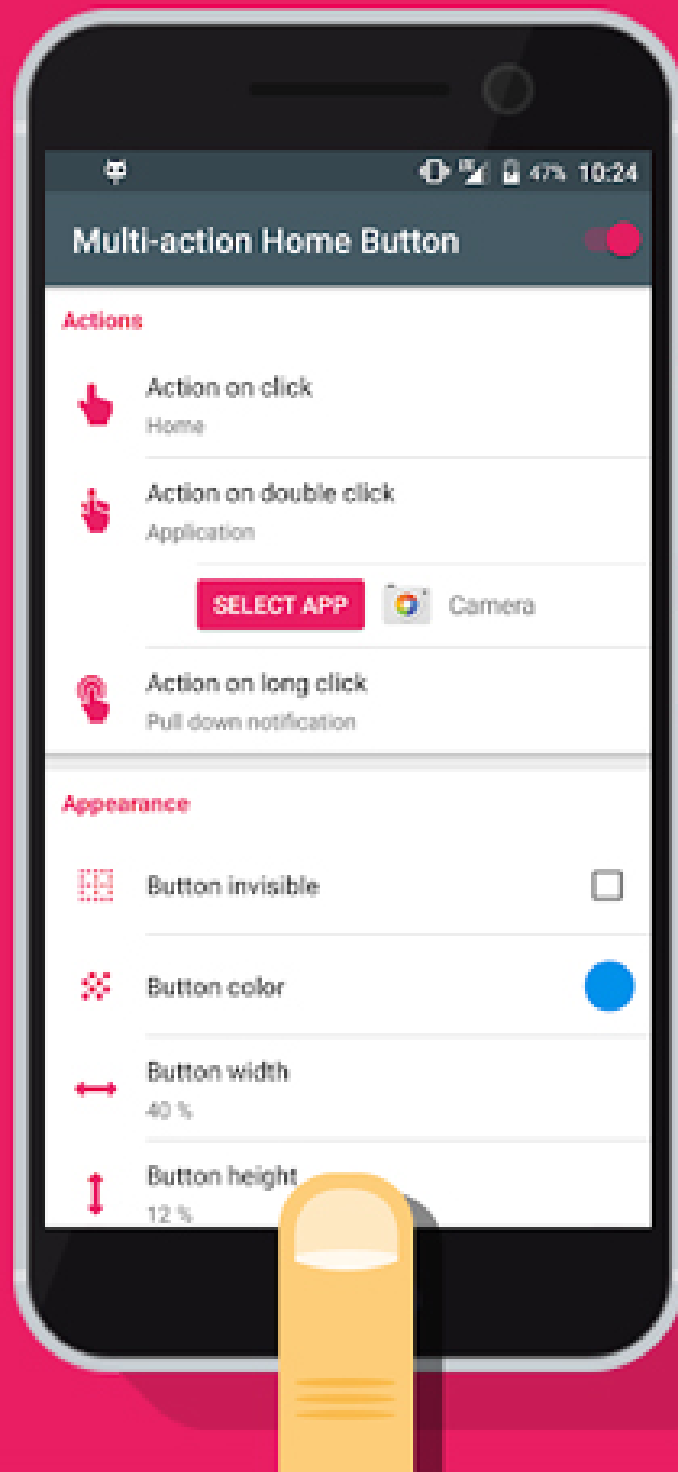

1. Download Multi-Action Home Button application

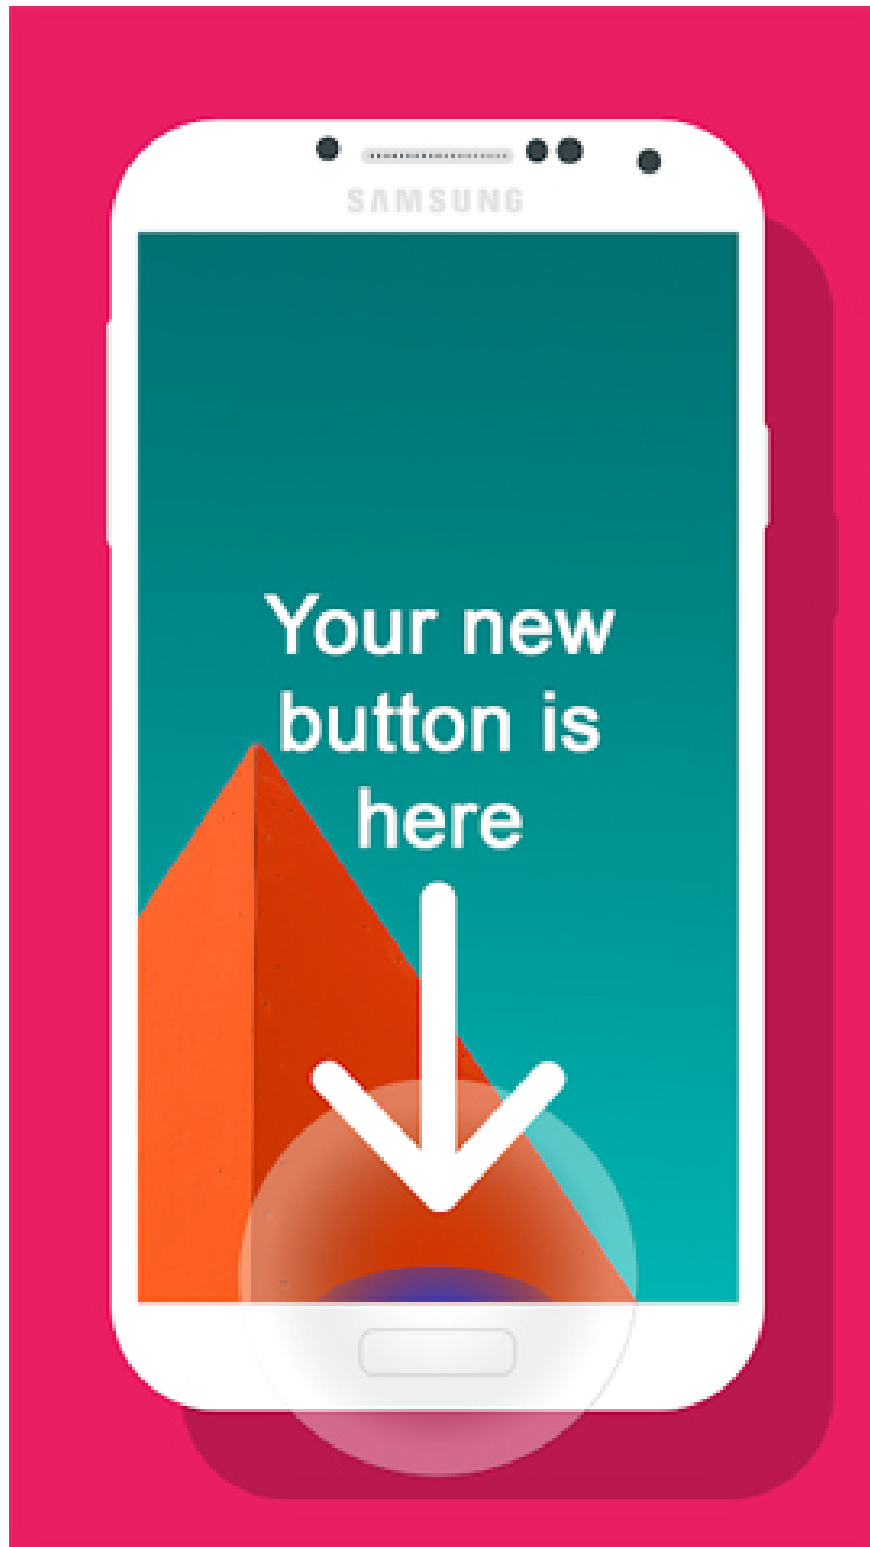

The application has a very simple setting, create a virtual Home button at the center interface below the screen. The tasks that users can perform with the virtual Home button include:

1. Use as Home button.

2. Return to the newly opened application.
3. Go back to the previous interface.
4. Access the Settings interface.
5. Open the notification bar on the screen.
6. Open the application list to choose.

## 6. Button Savior application

1. Download the Button Savior application

After installing Button Savior on Android device will display small panel on the phone screen. This small panel will be used to turn on or turn off the power button, return to the main interface, open the camera, make phone calls, increase or decrease the volume. With rooted Android device, there will be more options to simulate Back,

Search, turn off screen, volume keys.

## Button Savior

Select only 1 button to make the trigger icon performs the function you have selected when pressed. (Does not apply for D-Pad).
