

# The basic steps of fixing cursor cursors flutter in Windows

The status of the mouse pointer jumps, the mouse is disordered or the mouse moves automatically while typing the keyboard occurs quite popular, it causes inhibition for the user to keep the mouse to hold the cursor back. This may be because the Touchpad on your Laptop is too sensitive or maybe because you accidentally touched the Touchpad when typing. Please try to apply the following corrections below.

The status of the mouse pointer jumps, the mouse is disordered or the mouse moves automatically while typing the keyboard happens quite popular, it causes the "inhibition" for the user when having to hold the mouse to "hold" child pointing back. This may be because the Touchpad on your Laptop is too sensitive or maybe because you accidentally touched the Touchpad when typing. Please try to apply the following corrections below.

## Fixed the problem of mouse malfunction, jump, move by hardware

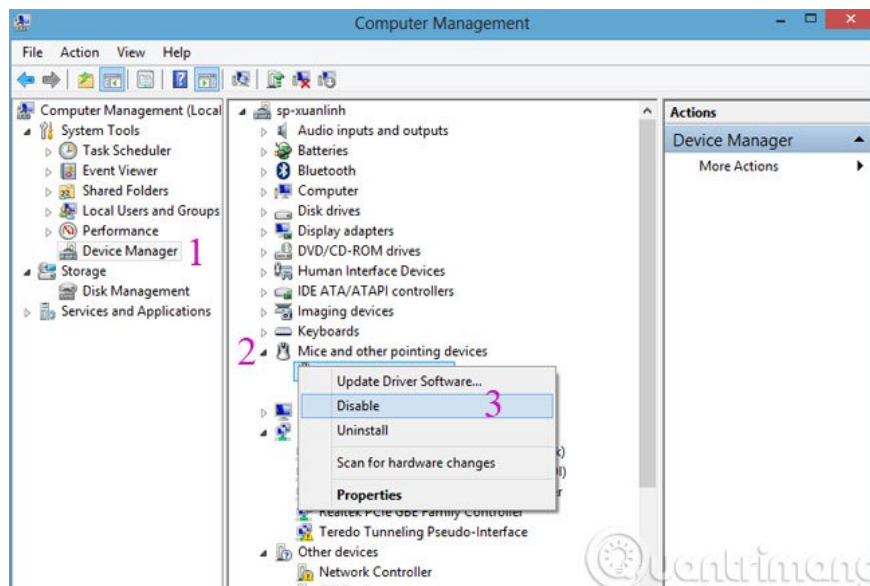

### Switch mouse connection port

If you are using a USB mouse, or a wired mouse, try switching the port to another port. Sometimes the USB port has a problem that causes the mouse to be affected, making the mouse unable to control as desired.

### Turn off Touch Pad on laptop

Using a combination of external mouse and touchpad on the laptop will cause the mouse to jump around if you accidentally touch the mouse of the laptop. So if you use an external mouse, you should turn off the Touch Pad to avoid such situations and find out the exact cause of the mouse disturbance. You can use the shortcut Fn + F7 (or the F key has the mouse hand shape) to turn it off.

Or open **Device Manager** > **Mice and other pointing devices** . If you see some **Touchpad** items, right click on it and select **Disable** .

Another solution is to install external software like **TouchFreeze** or **Touchpad Pal** , which will automatically disable the touchpad when you type, if you accidentally touch the touchpad in the palm of your hand.

### **Check if the mouse cord is pressed or not**

For wired mice, it is sometimes because you put heavy objects on the mouse wire, making it impossible to move flexibly, which will lead to mouse malfunctions that move or run on the screen very uncomfortably.

### **Check the touchpad**

Make sure your touchpad is clean, flat, free of dust, particles or anything that sticks to it. If the mouse surface is too dirty, sticky, not flat, it will affect the laser eye of the mouse and thereby reduce the accuracy of the mouse.

### **Disconnect other peripherals**

Sometimes the mouse is faulty because you connect too many external devices such as a stylus, wireless keyboard, touchpad, etc. If these devices are not compatible, they may accidentally cause them to conflict and mutual influence. Please try disconnecting.

### **Sure the mouse is not broken**

Please check carefully whether the mouse has any abnormalities in shape, there is no missing part. If the mouse has been used for too long, or has just been soaked in water, the chances are high because of the mouse, you should consider the new mouse investment plan.

## **Fix broken mouse error due to software**

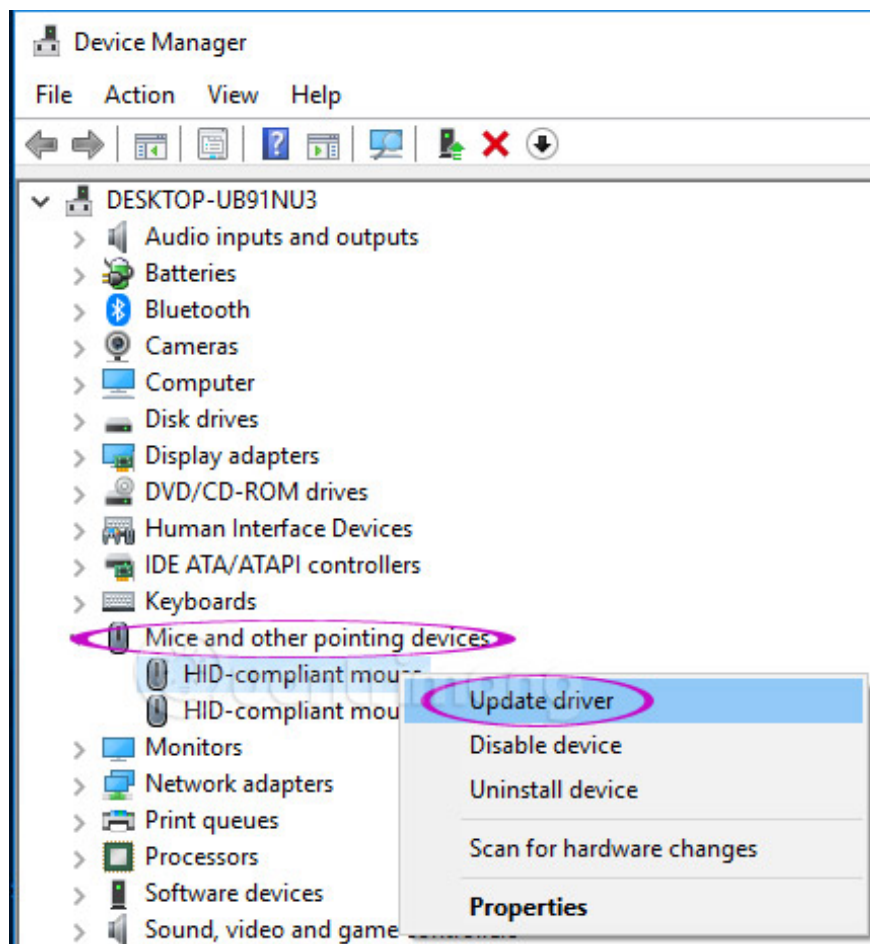

### **Check for viruses, keylogger software**

Sometimes a jumper is probably because your computer has been infected with malicious code and the mouse is being controlled remotely by some handsome hacker. Download the antivirus software now, scan to check if the device is infected with viruses and malware.

## Update the driver for the mouse

Outdated drivers will also cause the mouse to have problems, so if the hardware issues are okay, the computer is not infected, then check and update the mouse driver. Enter Device Manager in the search bar, then click Device Manager in the results, navigate to Mice and other pointing devices> right-click on each device and select Update driver. If you are afraid to do it manually, you can use driver update software. How to automatically update drivers on Windows using SnailDriver

## Turn off Hide pointer while typing

If all the above methods are still not useful, try adding this way. Open **Control Panel > Hardware and Sound > Mouse > Pointer Options**, then cancel check **Hide pointer while typing** and check if it fixes the problem. This option will hide the mouse cursor while you enter the content.

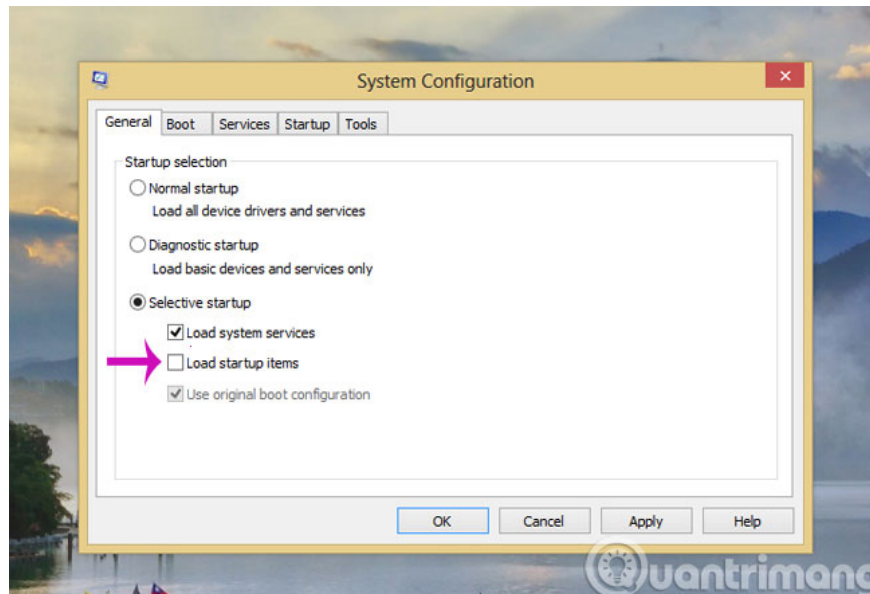

### The last way

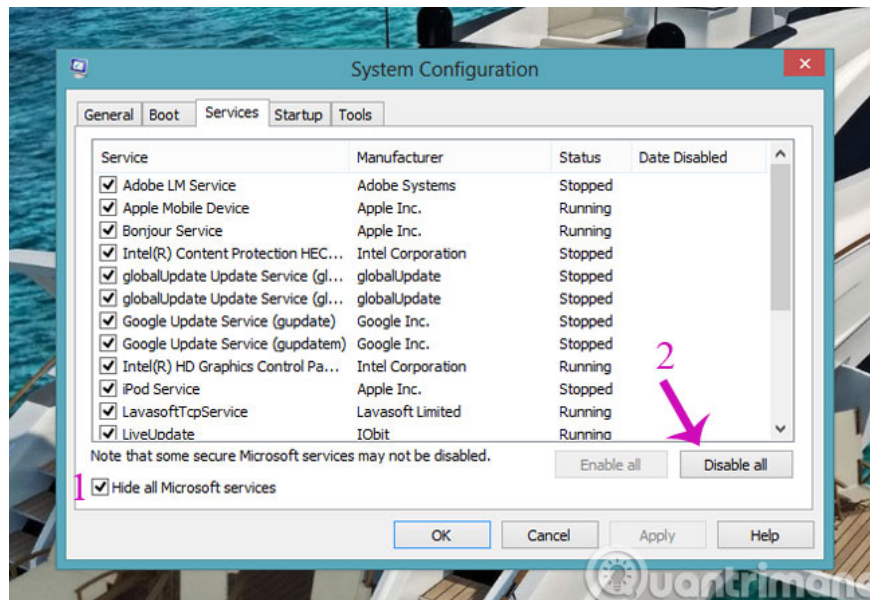

**Recommendation:** This way will disable quite a lot of applications that start with Windows, have filtered out the system application, but you should still be careful and follow the instructions carefully, otherwise it will lead to unfortunate errors. there.

Start the computer in **Clean Boot State** mode and see if the problem is fixed or still exists. If so, it may be because some programs interfere with the normal operation of the mouse. You will have to try and identify the probable cause.

To enter the **Clean Boot State** clean **boot state** , open the **Run** dialog box and enter the **msconfig** command to open **System Configuration** . Click the **General** tab and then click **Selective Startup** . Uncheck **Load Startup Items** and select **Load System Services** .

Next, click the **Services** tab , check **Hide All Microsoft Services** Click **Disable all** .

Click **Apply** / **OK** and restart the computer. This will put Windows into a clean boot state.
