

The Best Accessories to Turn Your Smartphone Into an Entertainment Hub

Gone are the days when phones were only used for making calls to immediate family members and had a battery life of over three weeks. No, in the modern-day, phones have become something entirely different to what anyone could have expected.

A mobile phone can now perform so many different functions that it is truly mind-boggling. Whether it be gaming, watching videos or films, or even reading articles like this, the number of things you can do on a phone is extraordinary.

Following this, there are now a plethora of phone accessories out there that plan on helping people even further develop the entertainment capabilities of a phone, and this is exactly what we are going to be telling you about in this article.

Picture 1 of The Best Accessories to Turn Your Smartphone Into an Entertainment Hub

1. Ergonomic Gaming Controller

The gaming controller is a simple yet essential phone accessory for anyone that wants to turn their mobile into a fully-fledged entertainment system. The number of things you can do with just a gaming controller alone is outright obscene, and with the heights of popularity that gaming has reached today, this is definitely one you are going to want in your arsenal.

You may be asking how a game controller would work for a phone. Well, it's simple. Imagine a Nintendo switch or the latest generation of PSP. A gaming controller essentially turns your phone into a bootleg gaming console, and it provides a near-identical experience to that of any other handheld console.

There are a ton of amazing phone controllers out there that will be more than enough to suffice even the pickiest gamers among us, and there are different variations and themes for every niche imaginable.

For such a simple accessory, a gaming controller really does make a world of difference in how you view your phone. In one instant, your mobile gets transformed into something much more than just a device to play games on whenever you travel, and in reality, a good phone with a gaming controller can rival even some of the highest-end consoles out there.

2. Mobile Phone Stand For Comfortable Gaming

If you are someone that enjoys watching streaming content, or perhaps like to head over to reliable mobile casinos for a game of poker or spinning the roulette wheel, a mobile phone stand can be incredibly beneficial.

You don't really notice how much strain can come from holding a phone up for a prolonged period, and this is even more the case for the newest generation of phones which can rival that of the arm-size phones from the 60s. Moreover, for most people, this pain and agitation is something that is often just accepted as being part of the experience of using a phone. However, this doesn't have to be the case.

Immediately after getting a phone stand you will feel the sudden relief of tension, and you will find that your capacity for using certain phone functions is greatly increased. You will no longer be limited by how much your arm can take until it goes numb or by your emboldened pain tolerance. No, now you can entertain yourself to your heart's content.

The vast majority of people never even consider getting a mobile phone stand, and it is a thought that seldom comes across most people's minds. Although, if you do decide to take the plunge and get a mobile phone stand, you will soon wonder why you didn't get one sooner.

Something as inconspicuous as a phone stand can make a massive difference in how you perceive your phone, and it really can do wonders for making your mobile feel like the ultimate entertainment system. Do not overlook the humble phone stand.

3. Pocket Projector For Better Imagery

In order to truly transform your phone into something different entirely, you have to take a step further than simple phone stands and gaming controllers. Sure, the two previous entries on our list are incredibly practical in nature, and there is no doubt that they can completely change your experience with a phone.

However, the two previous options lack a little flair, and this is where pocket projects come into play. Pocket projectors can give your phone the ability to be used as a mini projector, and the number of things you can do with this is extraordinary. To give just one example, many people choose to use pocket projectors in order to make their own makeshift cinema, and this is just scratching the surface.

Creative people are going to have a field day with pocket projectors, and the only limits you have with this tech are the ones that you put on yourself. Moreover, despite popular belief, pocket projectors are not even that expensive.

There are a plethora of affordable pocket projectors out there that can easily be purchased on a limited budget, and the amount of utility you get just from this one item is well-worth every penny spent.

Pocket projectors are truly the epitome of transformation. There are very few other accessories out there that have the transformative properties that this piece of kit entails, and there is no question that they are easily one of the best add-ons for any person's phone.

This all goes without saying just how much fun it is to have your very own mini projector. Pocket projectors are one of the coolest gadgets on the market, and you are almost guaranteed to feel a little bit of giddiness at the mere thought of having this tech at your disposal.

The three phone accessories we listed really are only scratching the surface. In reality, there is a near endless list of exciting innovations that can turn any phone into a fully-fledged entertainment system, and if this is something you are interested in, then there is a world of opportunity waiting out there for you.

However, we believe that the entries we mentioned are the most practical/functional options that are out there, and there is no limit on the number of things you can do with just the three accessories we listed alone. Have fun.
