

The best browser for Android TV

Android TV can also be used for web browsing. Unfortunately, no browser is preinstalled on Android TV's operating system.

You can use Android TV to stream TV shows and movies from services like Netflix and Amazon Prime Video, watch media locally saved through applications like Kodi and Plex, even stream games from your computer. charged to the TV screen.

However, Android TV can also be used for web browsing. Unfortunately, no browser is preinstalled on Android TV's operating system. So which browser is the best for Android TV? Here are the best options you can consider.

Where is the best browser for Android TV?

1. Puffin TV Browser
2. Google Chrome
3. Mozilla Firefox
4. TVWeb Browser
5. Web Browser for Android TV
6. Other ways to browse the web on Android TV
 1. GameStream
 2. Transfer computer screen to TV

1. Puffin TV Browser

Many Android TV browsers do not work with the device's remote control. You need to use the gaming controller or smartphone application to operate and navigate around the application.

Puffin TV Browser works with Android TV's basic remote control, making it a great option for all users.

Puffin TV Browser has a version designed specifically for Android TV boxes. The specially designed interface makes Puffin TV Browser compact, fast and easy to see.

Other features include QR codes to add favorite websites to the application and support Adobe Flash as needed.

The browser servers are located in the United States, meaning you will see the US website version.

Download Puffin TV Browser (Free).

2. Google Chrome

The strange thing is that Chrome is not preinstalled on Android TV operating system. Perhaps even more strange when there is no application version specifically for Android TV and this operating system is not available in Android TV Play Store.

However, those strange things can't prevent you from installing Chrome on Android TV. You can install the application on the Android TV box using the web version of Play Store. Some devices will even allow you to install applications using voice commands.

Using Google Chrome on Android TV has both advantages and disadvantages. On the plus side, if you're using Chrome, you'll have access to all your bookmarks, browsing history, and other synced content.

One of the drawbacks is that Chrome may not work with the current Android TV remote control. This drawback makes using a bit more difficult than some other options on this list.

Download Chrome (Free).

3. Mozilla Firefox

Firefox is another famous desktop and mobile browser that you can sideload your Android TV device.

Like Chrome, there is no version of Firefox exclusively for Android TV. The lack of this browser presence on Android TV Play Store is due to Google's limited requirements for things that qualify as an Android TV application.

People who use Firefox on Android TV often point to extensions as one of the application's core benefits. Unlike Google Chrome, nearly all extensions will work on the Android TV platform.

Usually, many users also say that browsing YouTube in Firefox is faster than when using the official YouTube application.

Remember, you can easily manage Firefox or any other sideload application on your Android TV, so don't let the sideload aspect make you shy.

Download Firefox (Free).

4. TVWeb Browser

TVWeb Browser is very similar to Puffin TV Browser. TVWeb Browser is a web browser specially designed to run on Android TV operating system.

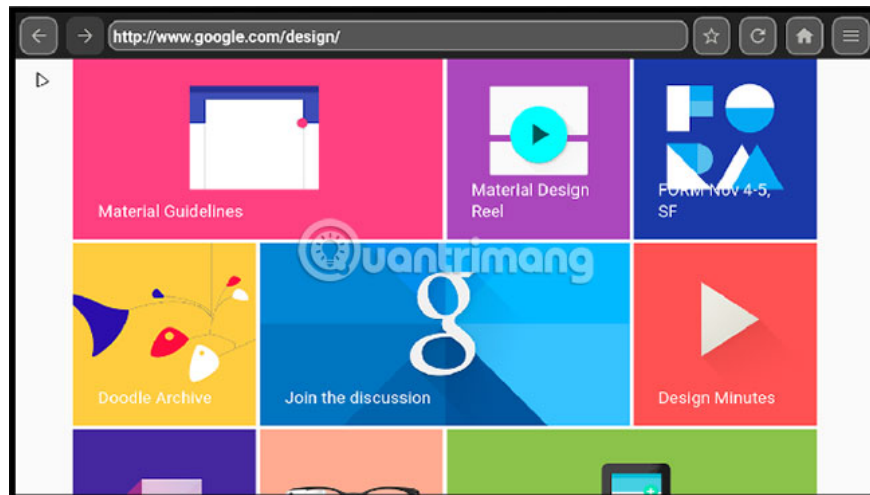

The navigation is very simple. On the left side of the screen, you have access to your favorite search engines, bookmarks and settings menu.

In terms of features, TVWeb Browser provides integrated voice search, bookmarks, access to browsing history, user agent conversion, custom search engines and mouse cursors. screen that you can navigate using regular Android TV control.

Completely free when downloading and using TVWeb Browser.

5. Web Browser for Android TV

Web Browser for Android TV is another Android TV browser worth considering.

In Puffin TV Browser or TVWeb Browser, it is difficult to navigate smoothly, but at least they are a viable option, if the only means of control is the standard remote control.

Some features of Web Browser for Android TV include support for HTML5 full screen videos and custom bookmarks.

Other ways to browse the web on Android TV

If no browser has mentioned enough to meet your needs, there are a few alternatives available as follows.

GameStream

If you own Nvidia Shield, you can use the GameStream feature of this device to access the Windows desktop and feel free to use any desktop browser you choose.

This is possible because GameStream allows you to manually add any game via the GeForce Experience application on your PC. Of course, you will need to use the Android TV remote control as a mouse. If your Android TV box supports it, you can use the Bluetooth mouse instead.

Project your computer screen on the TV

Android TV box comes with integrated Chromecast technology. Therefore, you can use Chromecast to project your computer screen on a TV, allowing you to use any desktop browser installed.

The downside of using Chromecast to access the browser on Android TV is latency. This option will not be a suitable solution for some tasks, but quite suitable for streaming videos and listening to music.

After reviewing the various options and considering the pros and cons, Puffin TV Browser is probably the choice. This application is quite neat, fast and provides a balance between features and convenience of use.
