

The Best External Hard Drives for 2020

In an era when 50GB of iCloud storage is 99 cents per month, and trim, slim external SSDs are getting inexpensive, external hard drives might seem less important than they once were.

But modern ones are faster, more sophisticated, and often more hard-wearing than their counterparts from a few years ago. They're ever more spacious for the money, too.

Getting the right hard drive in place can resolve your digital storage difficulties for years. You'll finally have enough space for all those movies, music files, photos, documents, and everything else you've managed to collect – and if you buy one of the finest external hard drives, you'll be able to entrust it with your data.

Here are some of our top choices for external storage options.

1. SEAGATE BACKUP PLUS 4TB:
