

The best free anonymous proxy servers

An anonymous proxy server, also known as a CGI proxy, is a server that operates through a Web form so that all requests on the Internet are filtered through this form, hiding the identity of the user. In this article, TipsMake.com will provide you with the best anonymous proxy server list.

An anonymous proxy server, also known as a CGI proxy, is a server that operates through a Web form so that all requests on the Internet are filtered through this form, hiding the identity of the user. In this article, TipsMake.com will provide you with the best anonymous proxy server list.

Setting up a device to use an anonymous proxy is not a hard job. Instead of configuring the address of the proxy server in the web browser, just like in the case of an HTTP or SOCKS proxy, you only need to use the Internet as usual but will browse the proxy site.

What can anonymous proxies do?

An anonymous proxy is designed to increase user privacy on the web by hiding public IP addresses provided by Internet service providers and routing all traffic through servers and locations. Only different public.

These proxy servers can help users avoid blocking content that some websites place on IP addresses from certain countries. When the site thinks the request comes from a supported country, it will not block. For example, if the site you want to use only works for Canadians, you can use Canada's proxy server to download the page.

A similar example shows the usefulness of proxies that if you are using a network that is blocked by an XYZ site but does not block the proxy site, in this case the user can use the proxy to access the XYZ site.

When evaluating proxies, look for a reputable and acceptable speed brand. Browsing sessions through anonymous proxies usually do not run as fast as regular browsers due to additional compilation related to going through the proxy server.

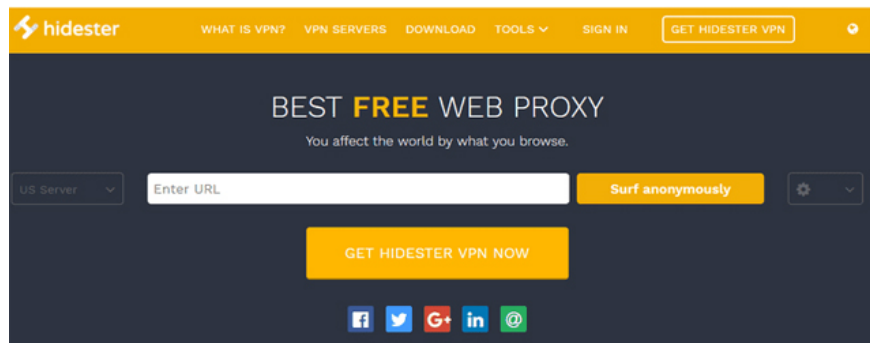

If you need to use a proxy site regularly, consider upgrading from a free proxy to a paid proxy service package to get better performance and can ensure better service quality.

Proxy vs VPN

An anonymous proxy works differently from a virtual private network (VPN) because it only handles web traffic that runs through a browser using a proxy. On the other hand, VPN can be set up for all devices to use, including programs and traffic that are not web browsers. For more details see what Proxy and VPN articles are different.

Anonymous proxy servers

1. Hidester.com/proxy/

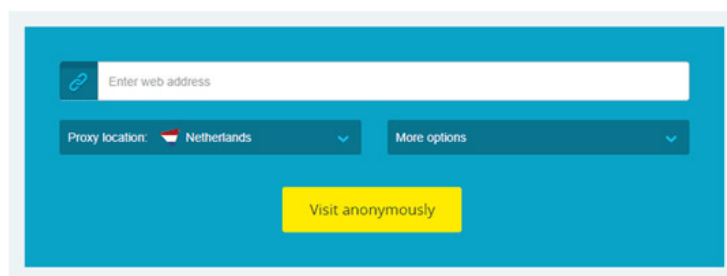

Hidester provides SSL proxy support to protect users from scripts and other malicious methods that could harm computers. It is considered the 'most reliable free proxy site on the market'. Users can choose a server in the US or Europe before starting web browsing, as well as choose to encrypt the URL, allow or disallow cookies, accept or reject scripts, and remove object from load.

While using Hidester, you can even change the browser introduction so that it looks like a website if you're using an operating system or other web browser. Users can also delete cookies from hosted websites and do this while using Hidester's proxy site.

Note: Hidester also has a temporary free email address and a password generator. If you pay for Hidester, you will have access to hundreds of proxies in different countries.

2. Hide.me/proxy

No logs. Zero. Nada.
We pick servers that live up to our high standards of security and privacy. They're accessible, and we are the only ones that operate no one else. They do not permanently store addresses, nor do they store logs. Each

Trusted by more than five million users worldwide.
Beginners, geeks, youngsters, adults... lots of different people from around the world use hide.me everyday. Why? Because it's safe, simple to use, and supports lots of different devices...

Super simple setup.
Our VPN and proxy is supported by all OS clients, so you don't have to be a rocket scientist to get up and running with hide.me. Use our helpful guides to set up your device and be protected in a few minutes.

A proxy site used for free anonymous browsing is hide.me. Start by entering the URL you want to access, and then select the proxy location from the drop-down box of options that are Dutch, German and American. As with some other sites in this list, hide.me allows to enable or disable cookies, encryption, scripts and objects.

3. ProxySite.com

ProxySite.com is a proxy site that can be used with any web site, including YouTube. You can choose between different proxy servers in the US and Europe. At the top of the text box enter the URL to use with the proxy, there are many buttons to quickly jump to sites within the proxy such as Facebook, Reddit, YouTube, Imgur and Twitter.

Users can control the use of cookies, scripts and objects or even block advertisements in proxies. In addition, you can also change the access server at any time while using the proxy.

4. KPROXY.com

kproxy

KPROXY SERVERS

Choose different servers for better protection, for avoiding a temporal problem or a permanent ban.

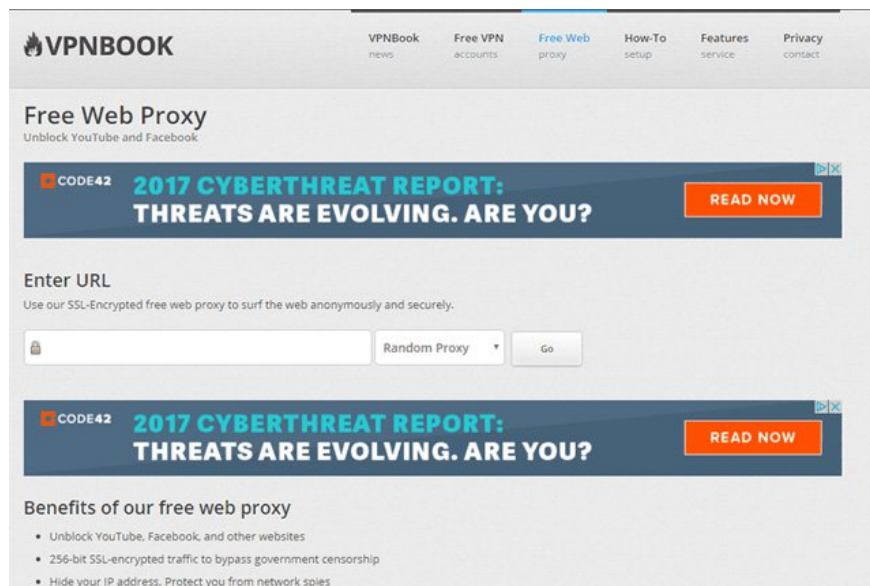

KProxy Public Server 1	KProxy Public Server 6
KProxy Public Server 2	KProxy Public Server 7
KProxy Public Server 3	KProxy Public Server 8
KProxy Public Server 4	KProxy Public Server 9
KProxy Public Server 5	KProxy Public Server 10

What makes KPROXY stand out is that while using the proxy site, users can hide the menu displayed at the top of the screen. Most anonymous proxy sites have menus there without the option to hide and can make browsing difficult. Another benefit of KPROXY is that it is possible to switch between ten different servers if the IP address has been blocked while using one of them, just switch to another server for immediate access.

Another feature you can only find on KPROXY is that it has a small app to hide all web traffic in Chrome or Firefox browsers.

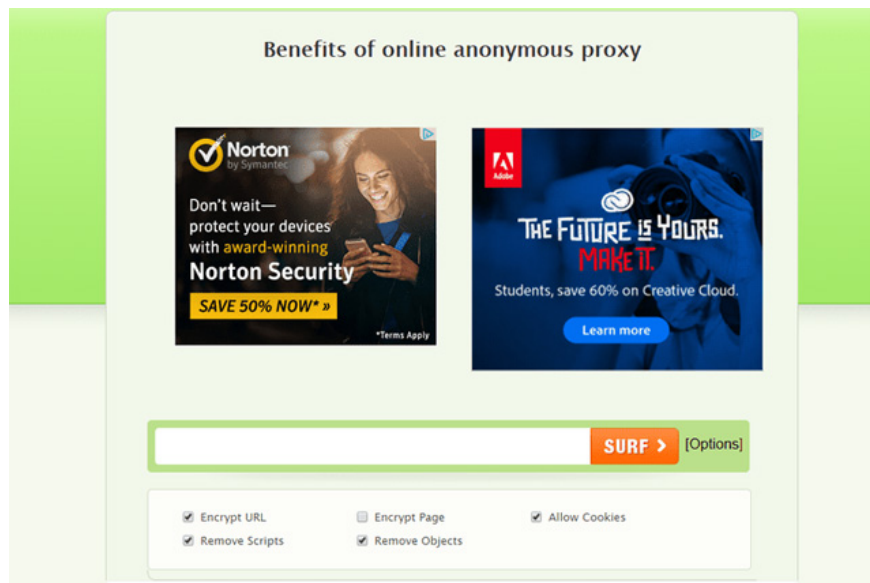

Note: KPROXY application is similar to VPN but only works when browsing the Internet in Chrome or Firefox browsers, depending on the installed program. It is really just a proxy that is applied to all websites requested through the browser.

5. [Vpnbook.com/webproxy](https://vpnbook.com/webproxy)

VPNBook provides free anonymous proxy sites, supports HTTPS websites and uses 256-bit encryption to hide traffic. You can choose to use a proxy server in the US, UK or Canada. It's easy to change the website you want to browse from the VPNBook proxy by typing it at the top of the page. However, you cannot control cookie permissions, block scripts, etc. like some other proxy support.

6. Zend2.com

Zend2 works like other anonymous proxies and can be used with YouTube and Facebook. That means you can watch videos on YouTube without worrying about having to pay for high-end proxy services.

This proxy supports features such as encrypted URLs, encrypted pages, scripts, cookies, objects. However, you can only enable these options before using the proxy site, unlike some other proxy servers that allow customization even when using it.

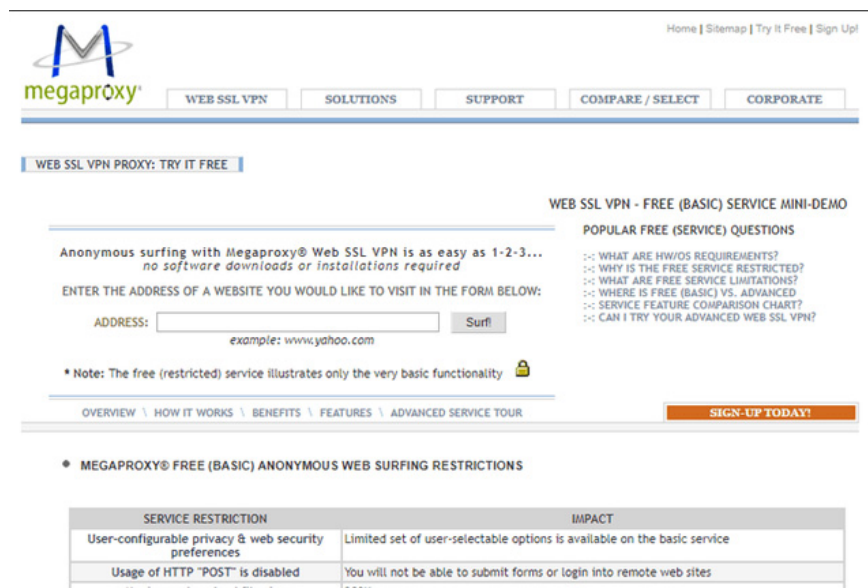

7. Whoer.net/webproxy

The screenshot shows the Whoer.net website interface. At the top, there is a navigation bar with a language dropdown set to 'English', social media links, and a '1 YEAR PLAN' banner for 'OPENVPN 4.99\$ /MONTH'. Below the banner is a navigation menu with icons for 'My IP', 'VPN', 'Web proxy', 'Speed test', 'Ping', 'Whois', and 'Articles'. The main content area is titled 'Web proxy' and contains a description: 'The Whoer.net web proxy is a quick and free way to change your IP address, unblock sites, and gain anonymity on the Web. We offer servers in multiple countries for you to choose from. Important! A web proxy neither encrypts your traffic nor gives you real anonymity on the Web.' Below this is a form with a text input containing 'http://www.google.com', a dropdown menu for 'Random server', and a green 'Go!' button. At the bottom of the page is a large green button that says 'Try VPN for Free'.

With Whoer.net, you can set up a proxy server to automatically choose a location or manual setting. Some positions may choose from Whoer.net: Paris, France; Amsterdam, Netherlands; Moscow, Russia; Saint-Petersburg, Russia; Stockholm, Sweden; London, England; and Los Angeles, USA. However, users cannot delete ads at the top of the browser unless purchasing their VPN service.

8. Megaproxy.com/freesurf/

The screenshot shows the Megaproxy.com website. At the top, there is a navigation bar with the Megaproxy logo and links for 'Home | Sitemap | Try It Free | Sign Up!'. Below the navigation bar is a menu with links for 'WEB SSL VPN', 'SOLUTIONS', 'SUPPORT', 'COMPARE / SELECT', and 'CORPORATE'. The main content area is titled 'WEB SSL VPN PROXY: TRY IT FREE' and contains a 'WEB SSL VPN - FREE (BASIC) SERVICE MINI-DEMO'. The demo includes a form for entering a website address, a 'Surf!' button, and a list of 'POPULAR FREE (SERVICE) QUESTIONS'. Below the form is a note: '* Note: The free (restricted) service illustrates only the very basic functionality'. At the bottom of the page is a table titled 'MEGAPROXY® FREE (BASIC) ANONYMOUS WEB SURFING RESTRICTIONS'.

SERVICE RESTRICTION	IMPACT
User-configurable privacy & web security preferences	Limited set of user-selectable options is available on the basic service
Usage of HTTP "POST" is disabled	You will not be able to submit forms or login into remote web sites
Business download files size	200KB

Megaproxy has a number of unique options that make it different from other anonymous proxy sites. Users can disable / enable the browser and user agent of the browser, remove ads from websites and block all cookies.

Since Megaproxy is free, it cannot be used to send information to forms or log in remotely to websites, nor can it download files larger than 200 kilobytes, block JavaScript, delete files Embedded Flash files, access HTTPS

pages, or view over 60 pages within 5 hours.

9. Anonymouse.org/anonwww.html

The screenshot shows the homepage of Anonymouse.org. At the top is the logo "Anonymouse.org" with a mouse character. Below it is the text "AnonWWW" and three buttons: "AnonEmail", "AnonWWW", and "AnonNews". A paragraph explains that many users surf under the illusion of privacy, but they leave a "calling card" that reveals their location and computer details. It states that this service allows users to surf without revealing any personal information, and that it is fast, easy, and free. Below this is a form to "Enter website address:" with a text input field containing "http://" and a "Surf anonymously" button. An example URL "http://www.yahoo.com" is provided. Two buttons are shown: "Your Calling Card without Anonymouse" and "Your Calling Card with Anonymouse". An advertisement for Norton Security is displayed, offering a 50% discount. At the bottom, there are links for "Members", "Terms of Service", "Privacy Policy", "Help / FAQ", and "Contact Info", along with a copyright notice for 1997-2017 by Anonymouse.

Anonymouse has been around for many years, it supports web, email and Usenet proxies. The website has been translated into English and German. Although it's completely free, users can buy a low-cost subscription to faster proxy servers and own additional services like non-advertising web surfing, larger file downloads, and accessibility. HTTPS sites.
