

The best three steps of home mini air conditioner cleaning

With only 3 steps below, you can completely clean the mini mobile air conditioner at home to operate with the best performance and durability as possible.

Mobile air conditioner is one of the devices that many users prefer to use because of its compact design and flexible mobility. There is no need to install the outdoor unit as a normal air conditioner, the machine uses a connecting tube to bring the hot air out. Therefore, the way to clean and maintain mobile air conditioner is the question of most people.

This work is actually very simple, with only 3 steps below you can completely clean the mini mobile air conditioner at home to operate with the best performance and durability as possible.

1. Instructions for cleaning the air conditioner properly
2. Three steps to clean the indoor air conditioner at home effectively
3. 4 easy steps to help you clean the hot air conditioner at home effectively

Instructions for cleaning mini air conditioner at home

Note:

Before doing any cleaning work for the machine, you must disconnect the Aptomat power source, disconnect the circuit breaker or unplug the power plug to ensure safety for yourself, and avoid unfortunate malfunctions for device.

Step 1: Clean the air filter net

Cleaning the dust filter will help the cooling operation of the air conditioner better, while saving electricity and prolonging the life of the air conditioner. Moreover, if the sieve is not cleaned and replaced periodically, the dust will stick in the filter net, so that the atmosphere in the room also carries bacteria and dirt that adversely affect the family's health. friend.

1. Remove the air filter on the back of the machine for cleaning.
2. Use a brush to clean the dust net or you can use a soft cloth to clean the dust on each filter net under the tap.
3. After cleaning, dry the dust filter net and put it in the sun to drain it and install it in the old position.

Note: You should renew the air conditioner filter periodically every 6 months to help the filter always work effectively.

Step 2: Clean the water drain hose

Instead of cleaning the tray regularly, you can install a water pipe to make it easier to drain the water. However, do not forget to check at least every 6 months to limit dirt, rubbish, or insects, spiders to make clogged pipes.

You can completely disassemble and mount water discharge pipes without the help of air conditioner repairmen. Just use a long brush to remove dirt and obstructions inside the tube, then use a strong spray hose to remove the remaining stains. Finally, you drain the water and you can install it in the air conditioner.

Step 3: Cleaning outside the air conditioner

Cleaning mobile air conditioner is not to forget the body because dirt on these parts will cause aesthetics and affect the cooling ability of the air conditioner. Use a damp cloth to clean, absolutely do not take wash water or spray directly, because the body of the camera contains an LED panel. Doing so will cause the internal circuit and compressor to fail.

When cleaning the mini mobile air conditioner, turn it on and test it to see if it works smoothly and cool quickly, if everything is okay, you have successfully cleaned the air conditioner but not It costs money to call a mechanic, and help the air conditioner work effectively.

Hope you are succesful.
