

The best website load testing tools available today

Google and search engines are increasingly interested in the load speed of websites. The best responsive websites both in terms of content & speed will be prioritized with higher rankings.

Google and search engines are increasingly interested in the load speed of websites. The best responsive websites both in terms of content & speed will be prioritized with higher rankings.

There are also opinions that the search engine data bases are slowly overloading, and the resources for crawling a website will be reduced to ensure the server works smoothly. And with reduced resources for each website, requiring websites to have faster load time to make the most of the resources.

In this article, we will show you some popular tools to check the loading speed of the website, if you find your website is slow or still have problems, you should find solutions to upgrade the server soon, Please go through the link or review your code.

1. Google PageSpeed

Uses: PageSpeed is a Google tool to measure website load speed and optimal solutions, shorten web loading time. This tool combines great use with Firebug, an extremely good SEO Tool that works on Firefox.

2. Pingdom Tool - Full page check

Uses: Pingdom Tool is a tool to help load the entire html structure of a website, including all objects such as images, Java Script, Flast, Rss, Frames / iframes.

Pingdom helps to list all data about load time, allowed load speed, number of website objects, capacity of objects

3. Google Webmaster Tool

Uses: Google Webmaster Tool is an indispensable tool for website administrators. This tool allows webmasters to check the most general way of server response speed through a time chart. This statistical chart provides the webmaster with an overview of the server or hosting capabilities they use. Since then, webmasters can consider the issue of adjustment so that it is reasonable in peak times.

Certainly in the near future Google will upgrade this tool, to bring more specific statistics.

Improve website loading speed

All of the unique download speed measurement tools we introduced above are designed to help you measure web loading speed. However, it is important to try to reduce the size of all files to the lightest, so that each user downloads the website to get the fastest download speed.
