

# The biggest Boss in the game with the size of a giant train car

Ice Worm is a boss that has an appearance like a giant ship, its huge size will surprise you if you have to face it.

FromSoftware's Armored Core 6 is gradually proving that this is a blockbuster PC game worth experiencing for gamers in 2023. Although the genre and playing style are no longer new, Armored Core 6 still creates Get special points.

One of them focuses on the boss system of Armored Core 6. Among them, perhaps the most impressive is the Ice Worm - a special giant-sized ice worm that players will have to face.

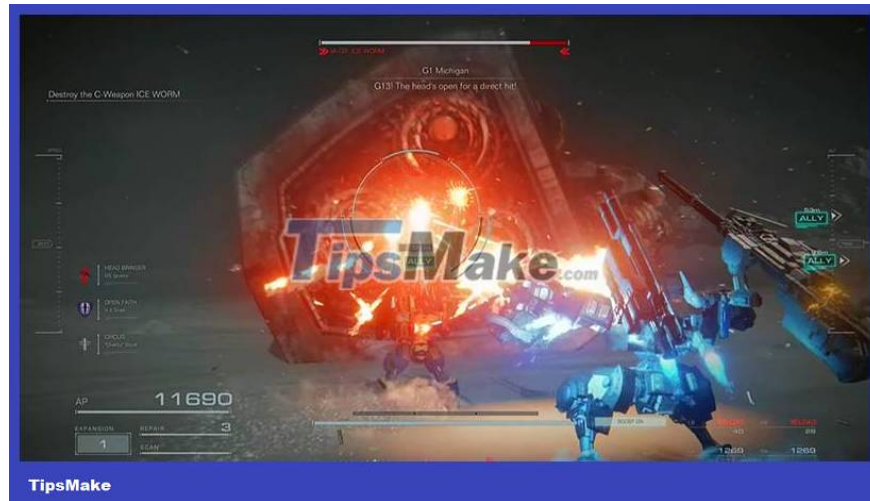

This is a boss that has an appearance like a giant ship, its huge size will surprise you if you have to face it. Ice Worm is located in a straight line stretching from First Step to Castle Morne on the Weeping Peninsula. This means that the length of this ice worm will be on both map areas.

If you have to confront this boss, you will have to move quite a lot from its head to its tail. Its size is so large that the character you control can only use its teeth.

Of course it is not a "loud empty box" boss. With its huge size, it also causes great damage and is annoying when it keeps popping up and then diving back down to the ground. You will also have to equip all current weapons to lure it out of the "cave". It has two extremely strong armor layers that make it very difficult to take damage, and at the same time you have to have good timing to dodge attacks. when it only has 1/3 of its health remaining.

Although this is not the most difficult boss, its size is enough to earn a place in the world gaming record book.

Defeating the Ice Worm in Armored Core 6 requires players to cooperate with different factions. It also requires the player to use a special weapon provided just before starting the battle to overcome the armor of this ice worm.
