

The Chrome gadget secretly exploits virtual money, making it slow

According to Windows Latest, after installing Archive Poster, an extension (extension) to support Tumblr social network on Google Chrome browser, it will run in the background and secretly use computer resources to dig up Monero causing the computer to run slowly.

According to Windows Latest, after installing Archive Poster, an extension (extension) to support Tumblr social network on Google Chrome browser, it will run in the background and secretly use computer resources to dig up Monero causing the computer to run slowly. According to security researchers, the training of virtual money on the Archive Poster begins in early 12/2017.

Archive Extension Poster silently uses the user's computer resources to dig virtual money.

Archive Poster allows users to quickly post, draft, queue and like posts right from the repository of another blog. And now more than 105,000 people download this utility through the Google Chrome app store.

This malicious utility uses malicious code to pre-encrypt and use the power of a user's computer to dig Monero encryption.

A large number of users have reported that this utility tries to use their browser to dig virtual money. Users called Avoid, said: *'Archive Poster takes advantage of computers to exploit virtual money. After installation, the device will "consume" the device's CPU and make it slow to see. Therefore, do not use this utility.'*

How to disable malicious code from the Archive Poster on Chrome Archive?

1. Experts recommend, if you are installing Archive Poster but see the level of CPU activity is always high every time you open Google Chrome, you should remove this extension to avoid wasting computer resources.
2. Using Opera browser version 50 is a convenient utility to prevent digging virtual money.
