

The company has created an SD memory card that can store data on par with the hard drive you are using

Have you ever been annoyed about how much GB to buy an SD memory card, and then have to consider what to keep and delete it to clean up the storage space on the card?

Have you ever been annoyed about how much GB to buy an SD memory card, and then have to consider what to keep and delete it to clean up the storage space on the card?

Lexar can solve both of these problems for you quickly with a memory card model with a huge storage space - on par with a regular hard drive you still use. However, the price of this product will not be 'lovely'.

Recently at CES 2019, a company specializing in digital media products, based in San Jose, California, USA has launched a line of professional SD cards with the name 633x SDXC UHS-I with extremely large storage capacity, up to 1TB, designed towards users who own DSLR cameras, HD camcorders and professional 3D cameras.

1. The most bizarre inventions CES 2019

This SD card has been tested for support for 1080p videos, 3D format footage and 4K videos. In addition, the product is also Class 10 certified with read speeds up to 95Mbps and write speeds of up to 70Mbps.

In its product launch, Lexar said 633x SDXC UHS-I will be its strategic product line, which has undergone extensive testing in practical conditions for performance, compatibility, and quality. as well as reliability, and obtained very positive results.

However, if you plan to record video with this SD card, you should consider it a little by 633x SDXC UHS-I rated V30. Although this is relatively beneficial for conventional camcorder models, it may not be suitable for use with high-end 4K models because the minimum recording speed is only about 30Mb / s.

1. Criteria when choosing to buy SD memory card

Yes, SD cards have 1TB capacity - the dream figure for all videographers and professional photographers. However, this dream will only come true if you spend 500 USD, it is worth pondering!
