

The configuration list can install OS X 10.9 Mavericks

Mac OS X 10.9 Mavericks is currently in beta with the first version of Developer Preview 1, it still has many bugs and some software is not compatible so it cannot run.

Mac OS X 10.9 Mavericks is currently in beta with the first version of Developer Preview 1, it still has many bugs and some software is not compatible so it cannot run.

For example, some software like **Viber** , **Skype** , **Parallels Desktop** , or **MPlayerX** . cannot be started, some software can run, the features are missing like **Photoshop** , **Yahoo** . Therefore If you want to test the best you should create a separate hard drive partition to install, should not **update** directly to the operating system in use.

All machines can run **OS X 10.8 Mountain Lion** can install **10.9 Mavericks** , the list of specific configurations you can follow below.

1. **iMac** (*Mid-2007 or newer*)
2. **MacBook** (*13-inch Aluminum, Late 2008*), (*13-inch, Early 2009 or newer*)
3. **MacBook Pro** (*13-inch, Mid-2009 or newer*), (*15-inch, Mid / Late 2007 or newer*), (*17-inch, Late 2007 or newer*)
4. **MacBook Air** (*Late 2008 or newer*)
5. **Mac Mini** (*Early 2009 or newer*)
6. **Mac Pro** (*Early 2008 or newer*)
7. **Xserve** (*Early 2009*)

Although **Developer Preview 1** is for developers, you can still download and try it if you want. Currently, downloading from **torrent** is quite fast and you can download it from here, using the **µTorrent** software to download. Divide and merge the **partition** in **MacOS**.
