

The DAY function - The function returns the day of the day, month and year in Excel

The DAY function: The function takes a date value from a date value. The return value is an integer between 1 and 31.

The following article details how to use the DAY function, the function returns the day of the day, month and year in Excel.

Description: The function takes a date value from a date value. The return value is an integer between 1 and 31.

Syntax: DAY (serial_number) .

Inside:

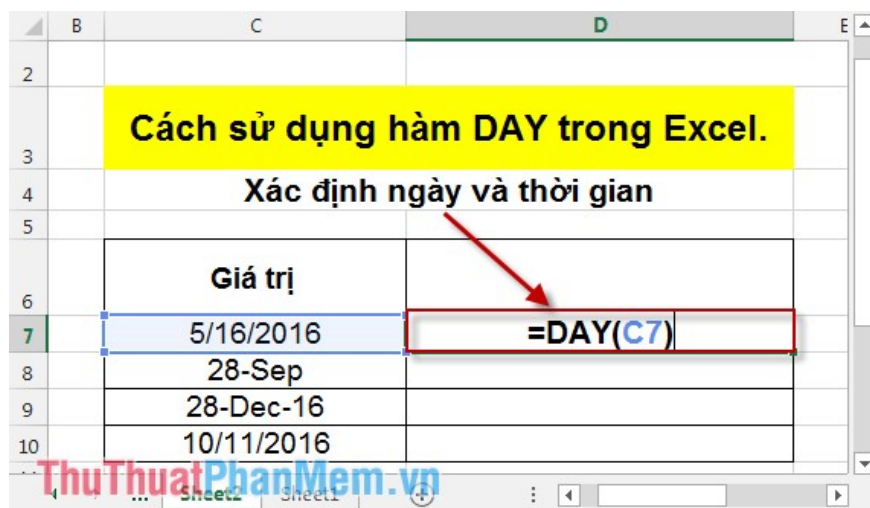

serial_number is the date value that you want to extract the date value.

For example:

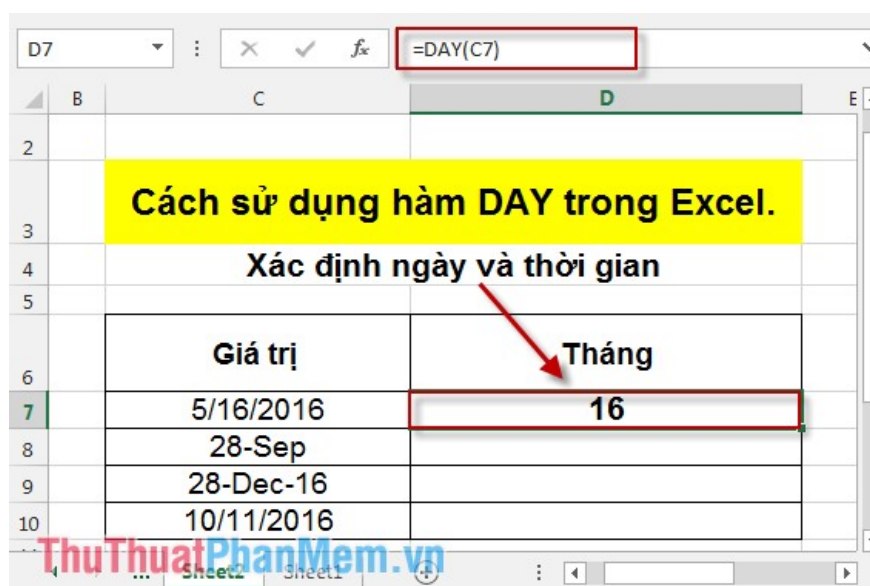

Separate date values ??from the following dates:

	B	C	D	E
2				
3		Cách sử dụng hàm DAY trong Excel.		
4		Xác định ngày và thời gian		
5				
6		Giá trị	Tháng	
7		5/16/2016		
8		28-Sep		
9		28-Dec-16		
10		10/11/2016		

In the cell to calculate enter the formula: DAY (C7) .

Press **Enter** -> separated date value results:

Copying the formula for the remaining values ??results in:

Cách sử dụng hàm DAY trong Excel.

Xác định ngày và thời gian

Giá trị	Tháng
5/16/2016	16
28-Sep	28
28-Dec-16	28
10/11/2016	11

If, if the month does not have 31 days, you still enter a date containing 31 days -> the function returns the #VALUE error value !.

Cách sử dụng hàm DAY trong Excel.

Xác định ngày và thời gian

Giá trị	Tháng
5/16/2016	16
28-Sep	28
28-Dec-16	28
31/11/2016	#VALUE!

Above is the usage and some notes when using the **DAY** function in Excel.

Good luck!
