

The difference between HongMeng OS and EMUI, according to the disclosure from the first to be tested

According to information from a few people in the initial test group revealed, HongMeng OS and EMUI, a customizable user interface developed by Huawei before has many differences.

HongMeng OS (or Oak OS) Huawei's own mobile operating system is in the final stage of development. According to Chinese media, Huawei is scheduled to launch the operating system on August 9, the time of the Huawei Global Developer Conference (HDC).

There is information that, Huawei is conducting HongMeng OS internally on Huawei Mate 30. Smartphone according to information from a few people in the original test group revealed, HongMeng OS and EMUI, custom user interface The variable developed by Huawei itself has many differences.

In HongMeng OS there appears a new cartoon image when starting the device. The operating system also supports flexible customization options according to user preferences such as customizing the main screen with widgets or customizing the lock screen . The application icon is also redesigned with many effects. than. Huawei has equipped its operating system with a completely new notification bar and a sizable search box. Overall, the user experience on HongMeng OS is quite smooth.

In the settings section of HongMeng OS there is a new reminder mode. The HongMeng OS photography app is still quite simple with fewer control options than the Huawei P30 photography app.

Testers said that many features on the HongMeng OS are still unavailable, maybe they are locked to ensure confidentiality or not fully developed.

Recently, Mr. Nham Chinh Phi - founder and CEO of Huawei confirmed that HongMeng OS has low latency, faster and smoother operation than Android and macOS.

1. Hongmeng OS of Huawei will have two versions (Chinese and international).
2. Highway screenshots are said to be the OS OS OS of Huawei
