

The difference between iPhone 6S and iPhone 6S Plus?

It can be easily recognized that iPhone 6S and iPhone 6S Plus differ in product size. iPhone 6S Plus has a screen bigger than 6S. Besides, these 2 devices also have a number of different points.

iPhone 6S and iPhone 6S Plus both own powerful hardware and are greatly improved on software. According to the evaluation and it is easy to recognize from the outside, the size and screen of iPhone 6S Plus are bigger than the 6S. The screen of iPhone 6S is 4.7 " and iPhone 6S Plus will be 5.5 ". The size of the 6S also has a smaller section of 138.3 mm long, 67.1 mm wide and 7.1 mm thick. Meanwhile iPhone 6S Plus will be 158.2 mm long, 77.9 mm wide and 7.3 mm thick. However, this is only an external assessment, so the internal configuration and the system have quite a difference between iPhone 6S and iPhone 6S Plus?

1. Device configuration:

In terms of specifications, these two devices are similar, using Apple A9 2-core 64-bit chips, 2 GB RAM, PowerVR GT7600 graphics with extremely powerful and efficient performance.

2. Screen, 3D Touch and vibration feedback:

According to many people, the image between iPhone 6S and iPhone 6S Plus does not have too much difference. Both devices use a quality Retina display. However, there will still be a slight difference in the number of pixels and sizes that users can hardly identify with the naked eye.

Regarding 3D Touch and vibration feedback, on iPhone 6S it seems lighter than iPhone 6S Plus.

3. Camera:

Regarding the shooting feature on 6S and 6S Plus, both devices own a 12 MP Camera that supports 4K video quality on the back, and a 5 MP secondary camera in front. Upgrading the iPhone with the rear camera up to 12 MP and the 5 MP front camera compared to previous iPhone versions has greatly supported the user in the process of shooting and filming. Image and video quality has improved a lot.

In this respect, both iPhone 6S and iPhone 6S Plus are similar and give image quality without differences.

The only difference is that the OSI optical stabilization feature on iPhone 6 Plus, which is not available in 6S. OIS will improve the low light when taking still images, especially when taking photos or recording videos in a vibrating, fast-paced state, the OSI will help the image quality.

But this difference does not affect the camera quality of 2 devices, when images and videos are taken under normal conditions.

4. Battery life:

This is a significant difference between iPhone 6S and iPhone 6S Plus.

iPhone 6S uses a 1715 mAh battery, while the iPhone 6S Plus is larger than the 2750 mAh battery for longer battery life. Under normal operating conditions, both of these devices provide equal operating time.

However, if you are a person who regularly plays games, listens to music or connects to the Apple Watch, the iPhone 6S Plus will be able to "heat up" more.

5. Summary of iPhone 6S and iPhone 6S Plus:

Without considering the design, screen size, it seems that iPhone 6S and iPhone 6S Plus do not have too many differences. Of course, everything is generally based on the needs of each person. If you like portable devices that are small, compact, there are not too many demands for gaming or use at a common level, you should choose iPhone 6S. As for the game crusher, usually watching movies on the device, you can choose iPhone 6S Plus with large battery capacity.
