

The difference between Smart TV and Internet TV

Smart TV and Internet TV are both TV lines that can connect to the network, watch Youtube videos, read newspapers, surf Facebook right on the TV. However, these two TVs have some differences.

Smart TVs and Internet TVs are two lines of television that have become popular in the world market. Basically, these two types of TVs can be connected to the Internet so users can surf the web, watch YouTube videos or even log in to Facebook right on the TV. Precisely this pretty similarity, many people have confusion between these two types of TV and think that they are all one.

However, these two TV sets are completely different. Each type of television will have its own characteristics to suit the needs of each user, each family. So what is the difference between Smart TV and Internet TV?

1. What is Internet TV?

Simply **understood** Internet TV is a type of TV **capable of connecting the Internet via WiFi or RJ45 port** . Besides showing off like a regular TV, Internet TV can also access websites when connecting to a network, watching movies, listening to music, watching Youtube videos, etc. similar to when accessing the Internet. on the computer.

Users will use the controls to enter the content you need in the search bar, depending on the different TV companies. In addition, Internet TV has VOD service with the ability to review any previously broadcasted program on the Internet, without depending on the broadcast time of the TV stations.

Currently on the market there are 2 types of Internet Television:

1. **Internet TV has operating system** : there are many TV series that now use the operating system on TV to expand the app store.
2. **Internet TV does not have an operating system** : only supports some basic applications such as Youtube, Chrome, Zing, Facebook, .

2. What is Smart TV?

Smart TV is **like a miniature smartphone with Ram , the operating system** with different interfaces for each TV company such as LG's WebOS TV, Sony's Android TV, Sharp's . Smart TV is also **capable of connecting to the Internet** like Internet TV, via WiFi or LAN cable. With Internet connectivity, we can go online, watch Youtube videos, access Facebook, Twitter.

Right on the screen of Smart TV also displays the content of network access so that users can easily access. Currently some smart TVs are also provided with **the ability to connect with other devices such** as phones and computers through connection forms such as DLNA, each company's application.

Application store on Smart TV is rich when you can search on the app store, or from the supplier. You can easily play games on TV with the ability to control TV through voice, even gestures or facial expressions, .

3. What is the difference between Smart TV and Internet TV?

Although there is a common Internet connection, Smart TVs are much more advanced than Internet TVs.

Smart TVs have a smart processor, which enables users to perform tasks like smarphone. Therefore, only **Smart TVs can install other applications** . As for **Internet Television**, you can only **use the applications available on the TV provided** .

One more feature is that the Internet TV limits the ability of users to interact with the TV, compared to the Smart TV series. With Smart TV, we can control the TV right on the computer or the phone, control the TV via voice or face. However, it must be noted to users that the interface and features of Smart TV are more complicated than Internet TV.

With much more advanced features of Smart TV, the price of this TV is not cheap and higher than Smart TV.

4. Should you choose Smart TV or Internet TV?

After all, when we want to choose certain types of TV, we also need to base on the needs of the family and the cost of each type of television.

Internet TV will be suitable for families who need to use the Internet at medium level, listen to music, watch movies, read newspapers and choose TVs with affordable budget. The Internet TV interface is also easy to use.

If your family is out of the ordinary entertainment, if you want to make TV connection with other devices like TV, phone, Smart TV is the right choice. The number of applications that can be used on Smart TV is unlimited, when you can install additional applications.

Finally, before buying Smart TVs or Internet TVs, we should also calculate the needs of family use, to find the right type of TV.
