

The duo iPhone Xs and Xs Max have 4GB of RAM?

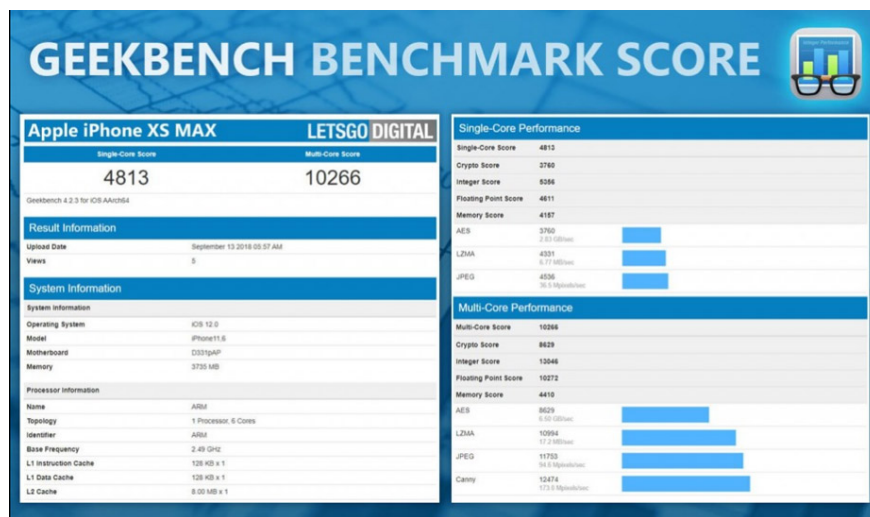

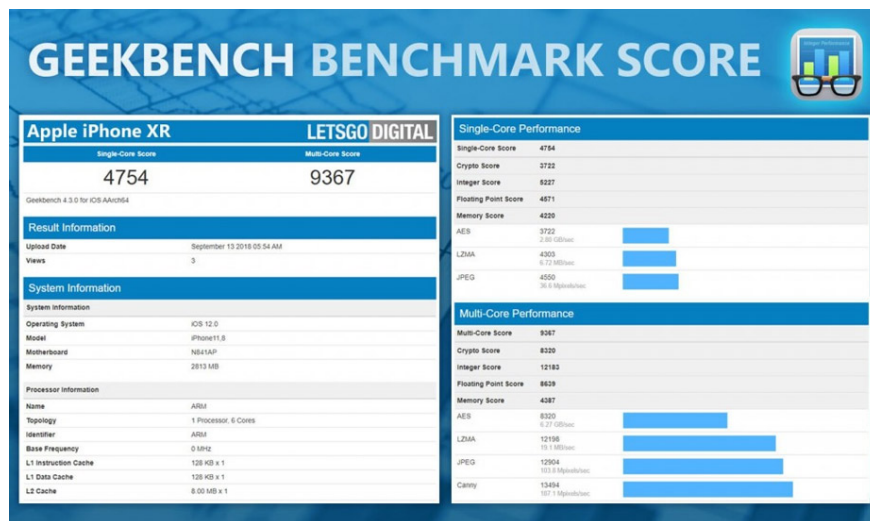

Apple did not disclose the RAM capacity of the iPhone Xs, Xs Max and Xr at the launch ceremony that took place yesterday. But recently many users have suddenly discovered on the GeekBench database that there is information about the RAM capacity of this new iPhone trio.

Apple did not disclose the amount of RAM of iPhone XS, XS Max and Xr at the launch ceremony yesterday. But recently many users have suddenly discovered on the GeekBench database that there is information about the RAM capacity of this new iPhone trio.

Accordingly, the duo iPhone XS, XS Max and Xr are equipped with Bionic A12 processor produced based on 7nm process, including 2 high-performance cores and 4 cores saving energy like what Apple has done dad.

In addition, the benchmark results also show that iPhone Xr, the cheapest smartphone in the new iPhone trio owns 3GB of RAM, similar to the predecessor iPhone generations. Meanwhile, Apple duo iPhone Xs and Xs Max are equipped with 4GB of RAM, higher than 1GB of RAM compared to iPhone X.
