2. How to change your FPT WiFi password on a phone.

1. How to change your FPT WiFi password on a computer

Step 1: First, connect the GPON modem to your computer via network cable or Wi-Fi.

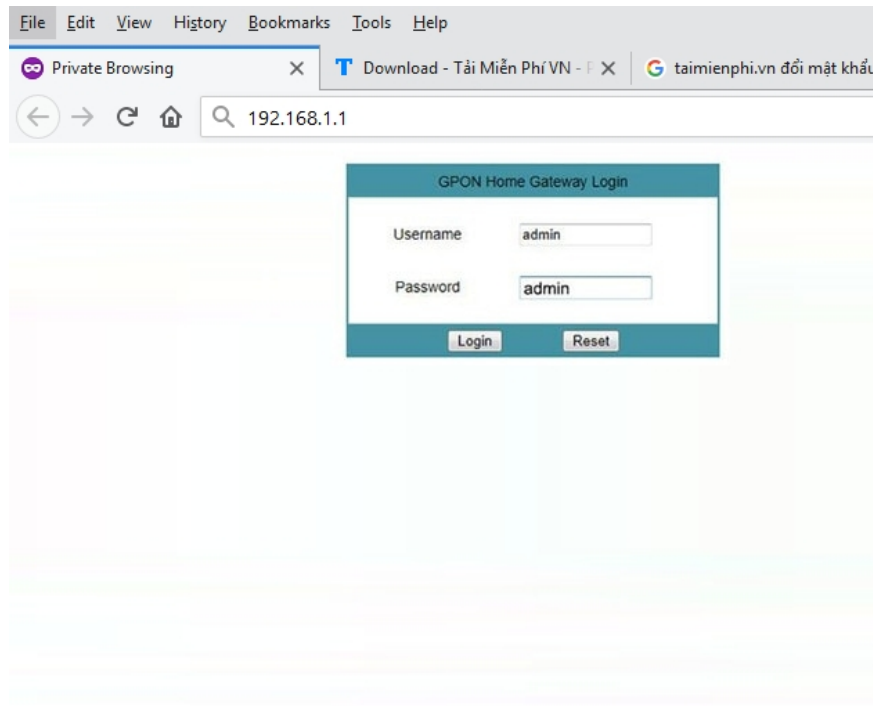

Step 2: Access the address **192.168.1.1** using the username and password both being "**admin**" (default)

- **User: admin**

- **Pass: admin**

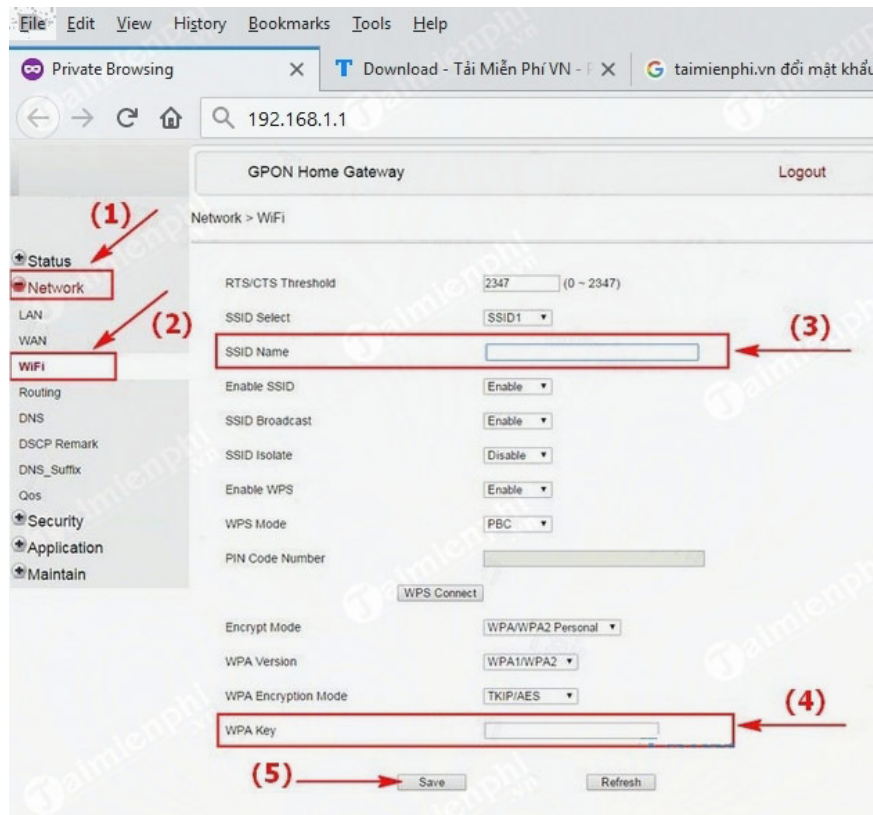

Note:

- Usually, the username and password for logging into your FPT modem are admin and admin.
- In some cases, the login password will be your customer code; don't ignore this password.
- In some cases, you may have changed your modem password but forgotten it. In this case, you need to ask for help from a network provider's employee; don't rush to press the RESET button on the modem, as it will erase your internet account configuration.
- To check if the login address is 192.168.1.1 or has changed to a different IP range, open **RUN** , type **CMD** , type **ipconfig** , press **Enter** , and your login address will be in the **Default Gateway** section.

Step 3: Go to the Network tab -> Under Wifi

You can name your Wi-Fi network in **the SSID Name field** and set a password for your Wi-Fi network in **the WPA Key field**. Then select **Save**.

2. How to change your FPT WiFi password on your phone

* If users want to change their Wi-Fi password on their phone, please see the detailed article "**How to change your Wi-Fi password using your phone**".

In summary, TipsMake has guided you on how to change your FPT WiFi password using a GPON fiber optic modem. After saving the password, you need to wait about 5-10 seconds for the modem to configure and restart. After changing your FPT WiFi password, try to avoid letting others know it, as they could be the cause of future network problems. Additionally, you can refer to the best **locations** for your WiFi modem to find the optimal placement.

If you're using a Viettel modem, you can refer to the instructions on how to change your Dlink WiFi password to change your WiFi password more frequently. This helps prevent unauthorized use of your WiFi by other devices such as phones and computers. The steps **for changing your Dlink WiFi password** are similar for other Viettel modems.

What are the username and password to log in to your modem? What is the login information for 192.168.1.1? TipsMake has compiled all the necessary **192.168.1.1 account** information for many different modem types so you can quickly access your modem's setup page.

If you're experiencing Wi-Fi connection problems, the cause could be a faulty modem, network card driver, etc. Depending on the problem, you'll need to find a solution. Refer to our article on how to fix Wi-Fi issues for easy and effective troubleshooting.
