

The easiest way to Find IP Address

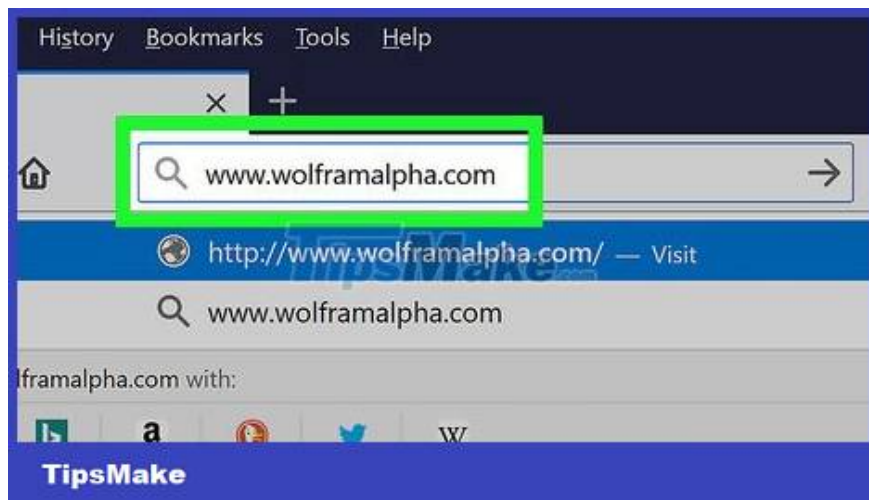

This is an article that shows you how to find the relative geographic location of an IP address. To trace an IP address, you must first have an IP address.

Using WolframAlpha

Find the IP address you want to retrieve. You can find the IP address of a website on Windows, Mac, iPhone and Android platforms.

You can also find the Skype user's IP address if needed.

Open the WolframAlpha page. Visit [page here](#) from a web browser.

Click the search bar at the top of the page.

Enter the IP address you want to find. For example, if you want to retrieve the IP address of Facebook, enter 157.240.18.35 in the search bar.

Press ? Enter. This is the operation to find the location information of the IP address.

See results. WolframAlpha usually only displays information such as the type of IP address, the Internet service provider of the address (such as Viettel) and the city in which the IP address is active.

You can click More to the right of the "IP address registrant:" heading to view relevant city information.

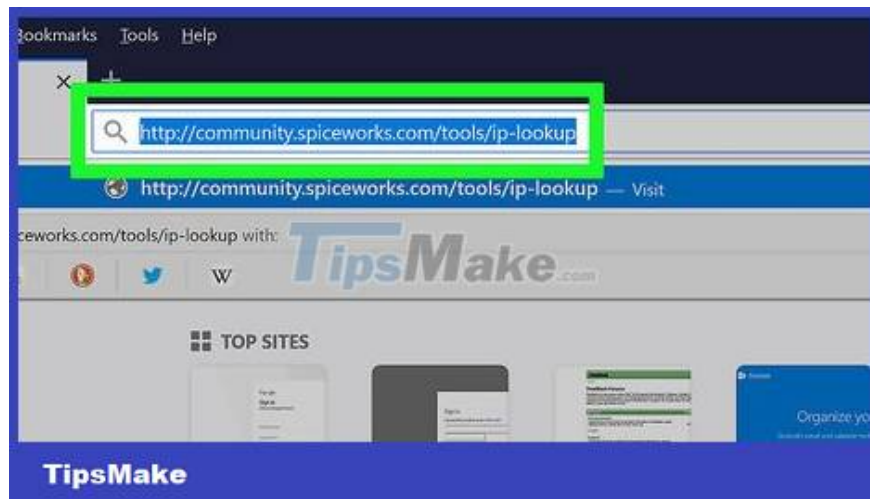

If WolframAlpha does not display IP address information, try IP Lookup

Use IP Lookup

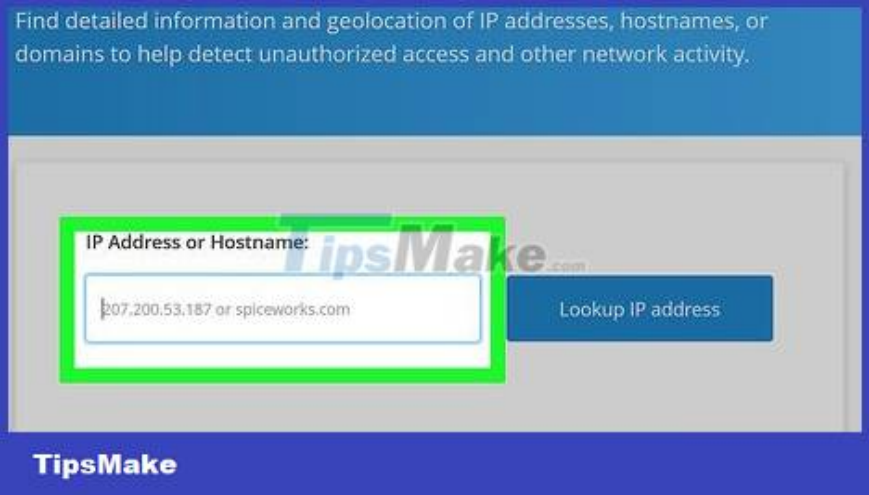

Find the IP address you want to retrieve. You can find the IP address of a website on Windows, Mac, iPhone and Android platforms.

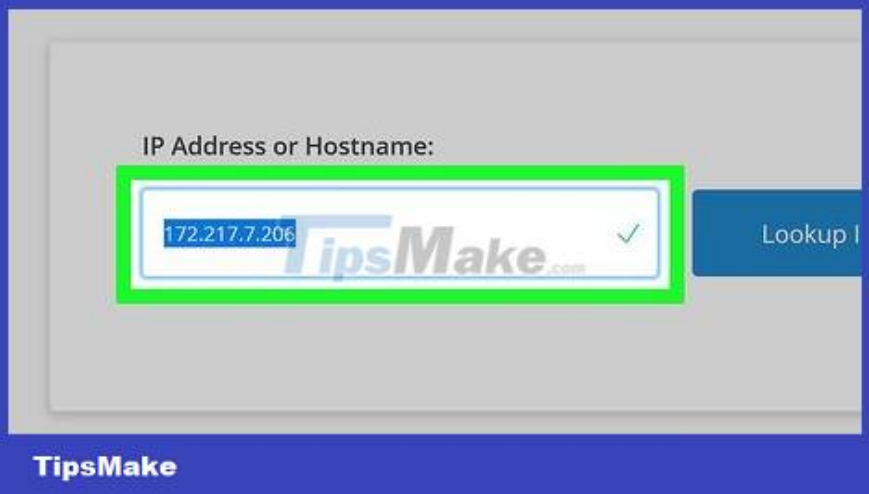

You can also find the Skype user's IP address if needed.

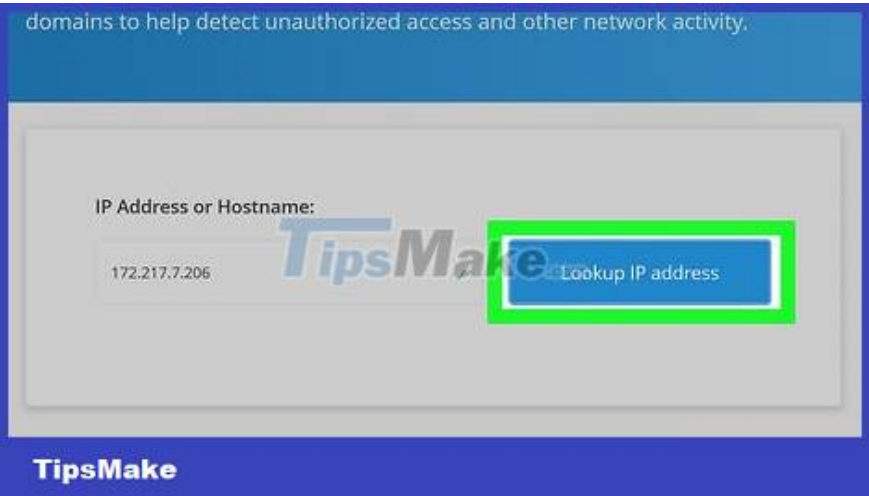

Open the IP Lookup page. Visit <https://community.spiceworks.com/tools/ip-lookup/> from a web browser.

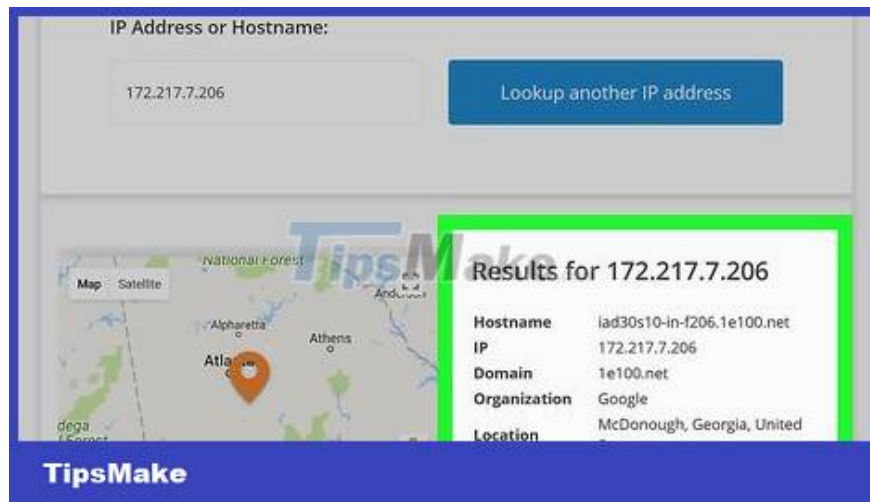

Click the search bar. This is the white box below the "IP Address or Hostname" heading.

Enter the IP address you found. For example, you would enter 172.217.7.206 to search for one of Google's addresses.

Click **Lookup IP** . This is the blue button to the right of the text input field. With this operation, the search for the IP address you entered will be conducted immediately.

See results. IP Lookup provides basic information about the location of an IP address (such as a city or province name) along with a map and pin location.
