

The experiment threw the iPhone X to the ground, mercilessly, then don't watch

To see if the iPhone X and iPhone 8 can withstand so many throws before they are no longer 'full'.

To see if the iPhone X and iPhone 8 can withstand so many throws before they are no longer "full".

iPhone X is the latest and super expensive phone compared to normal users. Worth \$ 1,000, it is also one of Apple's best-selling phones.

Everyone knows that the more expensive the phone is, the worse it is, and the fear of many people is to drop the phone on the ground. Although Apple has sworn that the iPhone X 'uses the best toughened glass on mobile', you certainly won't want this thousand-dollar phone broken into thousands.

But don't try to know? To see if Apple says it's true, some YouTube users have tried throwing iPhone X to the ground to test their bearing capacity. EverythingApplePro and TechRax are two familiar names, each with durability tests of iPhone X and Samsung Galaxy S8. You should see them yourself before continuing to know the results. The advice for you is not to think about their price.

In the first video, after a few unintentional falls, the camera to recognize the face of the iPhone X is no longer active. I don't know where the cause is, nor can I measure the exact intensity, or maybe it is just because I have to make the iPhone unfortunate. However, this also means that Face ID can be damaged if it falls many times.

Needless to say, the phone case can help reduce any type of vandalism, but it also means that you will cover the design of the phone, which Apple has spent a lot of time and effort to create. . So then it is a waste.

It is not known how many iPhones will fall into the future when it falls, or is it truly invincible? But anyway, watching the videos above, you will have to be more careful if you are using this thousand-dollar phone.
