

# The face is deformed when thrown with a water ball at a speed of 1000 times slower

The Slow Mo Guys Youtube channel performs experiments and records what happened in very short time when the face is exposed to a water balloon with a slow rotation speed of 1,000 times.

Being hit by the ball in the face when playing soccer is a common occurrence and it is quite painful. It happened very quickly, almost nothing could be seen but the face of the person being touched by the ball was red and swollen.

But if the ball is filled with water inside, besides that the person who "gets the kiss" of that water ball will suffer a lot of pain then what else is interesting?

The Slow Mo Guys Youtube channel performs experiments and records what happened in very short time when the face is exposed to a water balloon with a slow rotation speed of 1,000 times. And surely you will be amazed and amused by the face's unrecognizable distortion. Let's watch the video to follow the process.
