

The fast Google search tips you should know

Google is now the most popular search engine worldwide. As soon as you type the keyword, within a few seconds we get the results we need. However, there are a lot of Google search tips that you ignore, making search results sometimes not desirable.

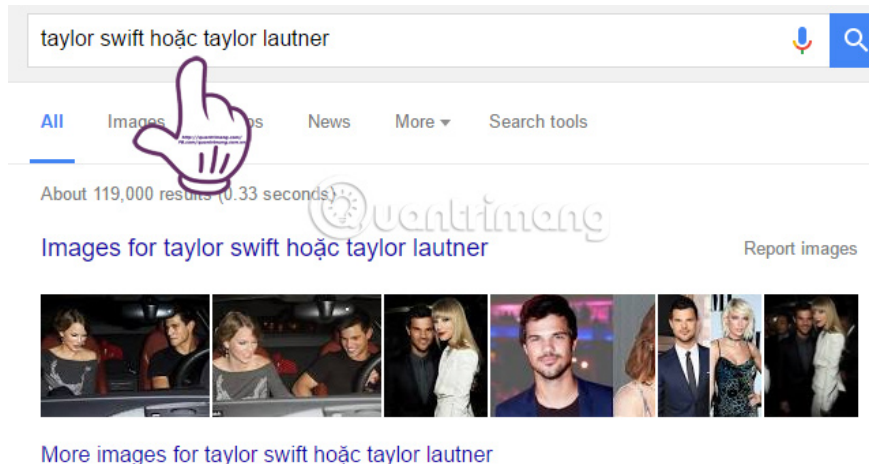

The big Google technology now owns the second largest search engine in the world. Any information, photos, videos, places you can absolutely use the search engine on Google, the results will be available in just a few seconds. And manipulate the search content in the Search bar of Google, surely everyone knows. However, if we want to find more complex, more accurate results, there are a few necessary tricks on Google. Join the Network Administrator to find out what these tricks are and how it will help your search on Google.

Google search tips

1. Use Google X or Y search keywords
2. Search by relevant results on Google
3. Search results in the website
4. Do not ignore the * when searching on Google
5. Do not remember many Google search keywords
6. Use search time frame
7. Search on Google by title or URL
8. Search related website
9. Find the correct phrase with quotes
10. Exclude the display results containing some specific words
11. Search by file type
12. Search exactly for a piece of text
13. Determine the exact day of the week
14. Get interesting information with Fun Facts
15. See search results in Star War style
16. Do math on Google Search
17. Converting currency units and measuring units
18. See the weather anywhere in the world
19. Search public data
20. Hours of sunrise / sunset
21. See the current time in a specific location
22. Do a barrel roll
23. Watch movie showtimes on Google

1. Use Google X or Y search keywords

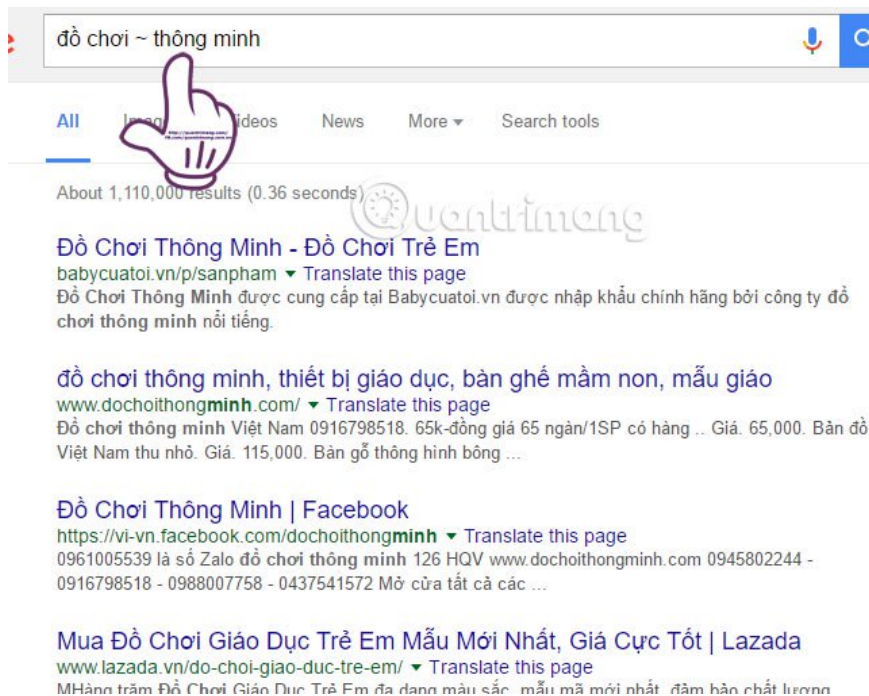

Sometimes we need to find something on Google, but we can't remember exactly how the name is written, or wondering how to write it. If this is the case, let us type the keywords you are wondering and how they are with **the symbol |** . Or we can also use keywords **or** to easily get search information for us.

2. Search by relevant results on Google

When you search on Google, synonyms will appear, including Vietnamese or foreign keywords. If you need to search for information related to synonyms related to the information of a certain topic, we should add the ~ symbol to the keyword to get search results.

For example, when I search for the keyword "smart toy", we will have immediate results such as wooden smart toys, smart toy sales addresses.

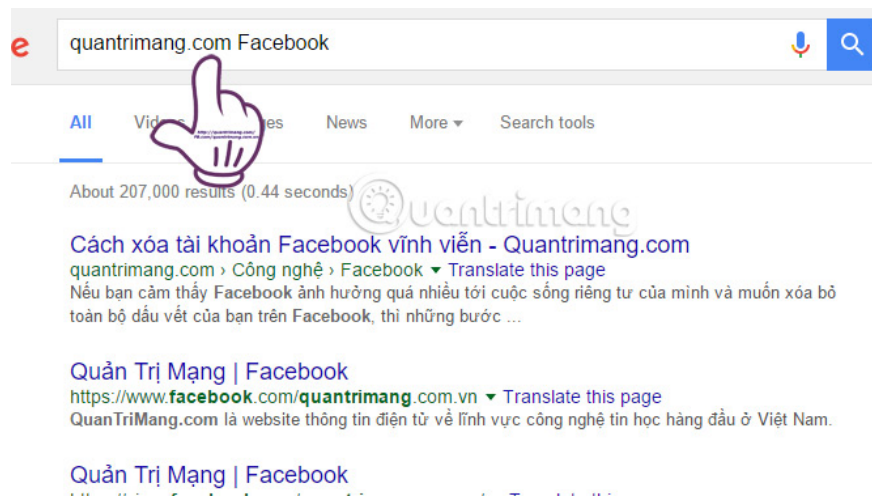

3. Search results in the website

If you need to find some information on a website, instead of typing in the content keyword or visiting the site to search, we can find the information on the page we are reading right away.

The search formula will be **the full site name and the name of the content to search** . The results will definitely be at the top of the search list and at a much faster rate, than we fumble on each keyword and article on that site. There is another tip, assuming you only want to search for "facebook" content on quantrimang.com and don't want to show results on another website, enter: facebook site: quantrimang.com in the search bar.

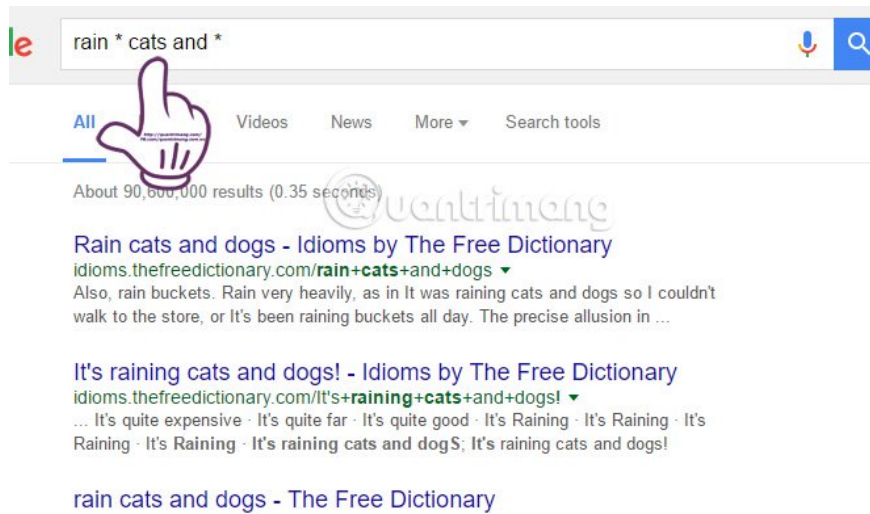

Or if you use Chrome and a support website, you can type: **full website name? what to look for**, for example: **quantrimang.com? facebook** in Chrome's address bar to search for content in the web of quantrimang.com without going through Google Search.

4. Do not ignore the * when searching on Google

Certainly when searching for something on Google, you won't remember enough keywords to search. If so, use the **asterisk *** in the keyword position that you don't remember clearly, to make more content appear. And the results you want to search will be in the list below.

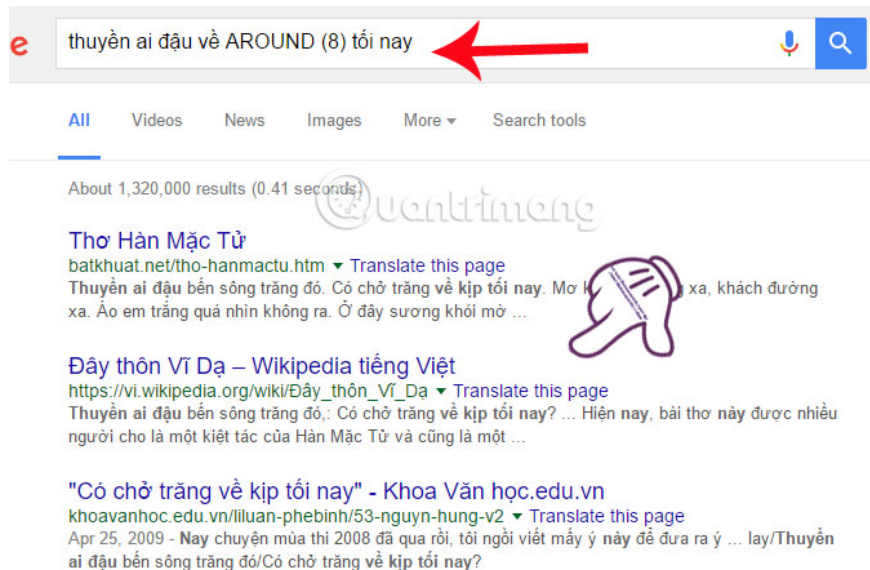

For example, I don't remember what the English idiom is in the picture below, I can enter the keyword with the * at the position of the missing words. The list will appear immediately below Google so you can check it out.

5. Do not remember many Google search keywords

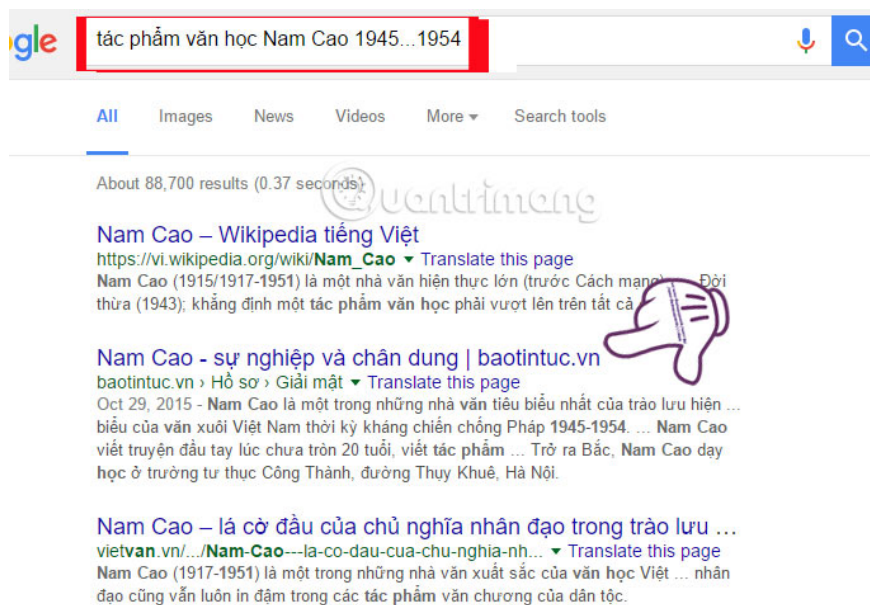

In case we forget too many keywords in the search content, you need to **write the first keyword, the last keyword on the Search bar of Google**, then put the **phrase AROUND + (approximate number of missing words) in between key phrases**.

For example, I want to search for 2 verses in this poem Vi Da village of Vo Da Tu, but do not remember the content clearly. So I will search for keywords according to the formula written on the side. The result will give the exact content of the two verses.

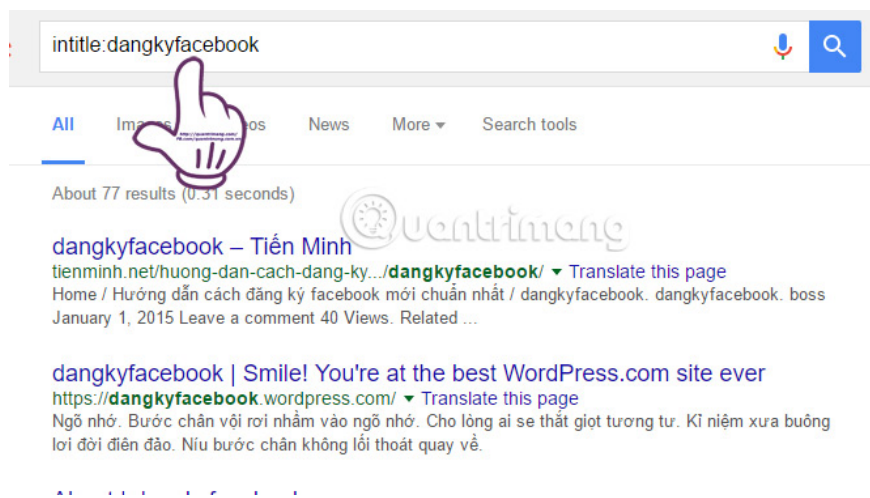

6. Use search time frame

Maybe you need to find a document but don't remember the exact time, you can replace it by searching by time frame, how long to how long. This will make Google easier to find. We can **put 3 dots in between 2 milestones**

7. Search on Google by title or URL

To be able to search for a particular keyword or article, you need to limit them by type **intitle:** or find the URL with **inurl:**.

8. Search related website

If you need to search for content on many websites, we enter **related:** keywords and then the website address.

For example, I want to find websites that share the same culinary content as the picture below. When entering the culinary website with related: keywords, the return list will include websites related to culinary issues.

9. Find the correct phrase with quotes

For example, type " **How to register, activate your WhatsApp account on your phone** " to bring you right to this article.

10. Exclude the display results containing some specific words

To be able to remove unimportant search terms in the results, you can simply **enter the - in front of the keyword** you need to remove.

Google search for "sách văn học -trung đại". The search results show a grid of book covers, including "The Great Gatsby" and "Trên Thiên Nguyên". Below the grid, there are links to "Tủ sách Văn học thế giới - Sách Hay" and "Tủ sách Văn học Việt Nam - Sách Hay".

When you want search results to remove words and phrases, just add them after the " - " sign. For example, find the phrase "Google search" but do not want to see "ads" just type: *Google search-ads* .

Google search for "tim kiếm Google -quảng cáo". The search results show three links to Google support pages for reporting issues with Google search on Android, desktop, and Search Console.

11. Search by file type

Find specific files, such as PDF, PPT or XSL by adding **filetype:** and 3 file abbreviations. For example, if you want to find PowerPoint files on the topic of medical care, in the Google search box, enter " *medical care filetype: ppt* " and this is the result:

The screenshot shows a Google search interface. The search bar contains the text "chăm sóc y tế filetype:ppt". Below the search bar, there are navigation tabs: "Tất cả", "Video", "Tin tức", "Hình ảnh", "Bản đồ", "Thêm", "Cài đặt", and "Công cụ". The search results are displayed below, showing approximately 990 results in 0.37 seconds. The first three results are:

12. Search exactly for a piece of text

It is very simple to just put the text you want to find in quotation marks, web pages containing this text will be listed by Google.

The screenshot shows a Google search interface. The search bar contains the text "thủ thuật tìm kiếm Google mà bạn nên biết". Below the search bar, there are navigation tabs: "Tất cả", "Video", "Tin tức", "Hình ảnh", "Bản đồ", "Thêm", "Cài đặt", and "Công cụ". The search results are displayed below, showing approximately 449 results in 0.35 seconds. The first three results are:

13. Determine the exact day of the week

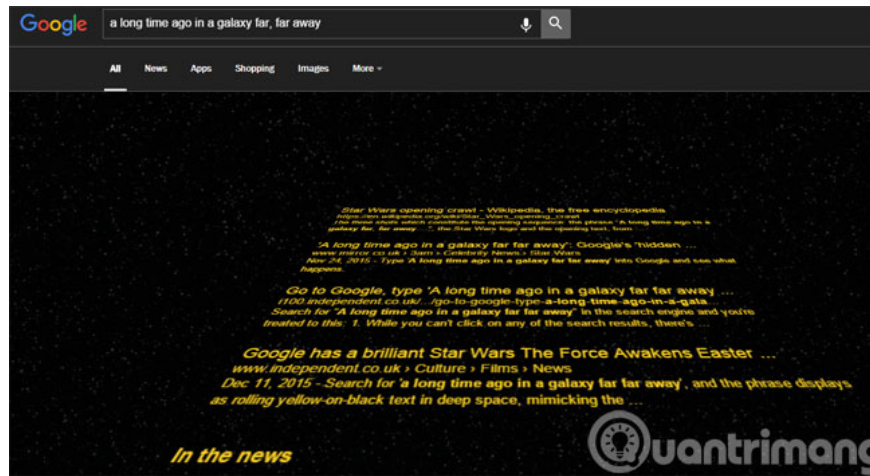

If you want to know what day of the year this **Valentine** 's Day is, type **What days is it in Valentine** , Google will produce the result on **Sunday**, February 14, 2016.

14. Get interesting information with Fun Facts

There is an alternative to Google Search, which is to type **Fun Facts** into the search box to get interesting information and knowledge.

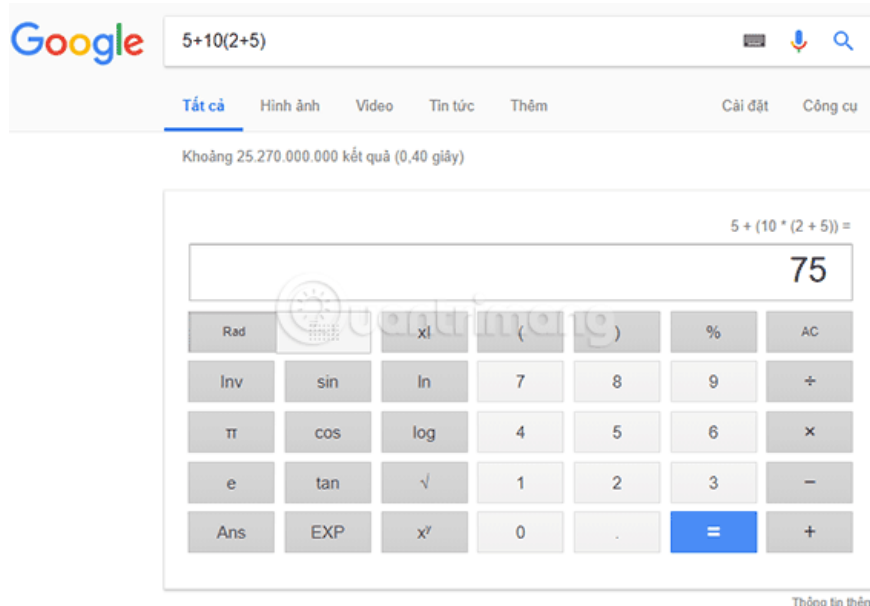

15. See search results in Star War style

If you are a fan of the **Star Wars** fantasy series, search the following way when you type **a long time ago in a far-away galaxy, far away** in the Google search box.

16. Do math on Google Search

Google search service can be used as a computer. Just type a quick calculation and Google will give you an immediate answer. Google can perform basic operations (addition, subtraction, multiplication such as $5 + 6$ or 3×2) and logarithmic calculations, operations with constants like pi, as well as trigonometric functions like Cos, Sin. Now, Google also provides a clickable spreadsheet tool to perform calculations, so you can use Google as a calculator application on a PC or smartphone.

You can even ask this tool to graph yourself by entering the function name along with the keyword "graph", as an example of graphing the $\cos 2x$ function below:

17. Converting currency units and measuring units

You can change Vietnamese currency into USD, Yuan, . from Celsius to Fahrenheit, from m to km, from miles to m, . and vice versa right on Google search, by entering : **quantity + units need to transfer = transfer unit** as shown below:

3000000 vnd = usd

Several examples of changing other units on Google

18. See the weather anywhere in the world

To know the weather in a specific location, go to Google. For example, if you want to know the weather in Ba Vi, how is Hanoi, type **Ba Vi weather, Hanoi**, Google will tell you the weather in this area. You can not only see the weather of locations in Vietnam but also see the weather of other places in the world by entering keywords: **Jeju weather, Korea** :

If you just type "weather" without typing in more specific locations, Google will produce weather results in your area. For example, if you are in Hanoi, just type "weather" into Google, you will get the Hanoi weather

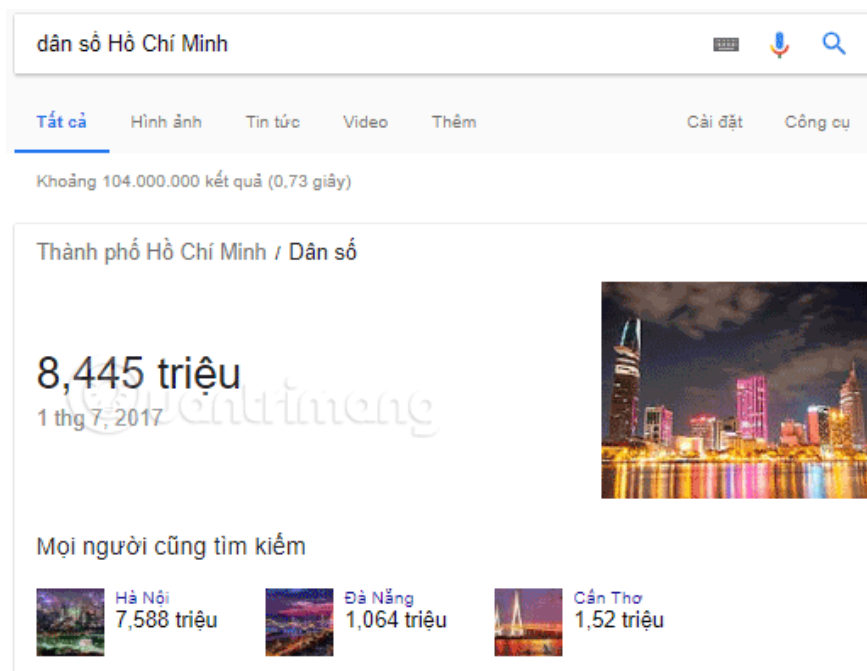

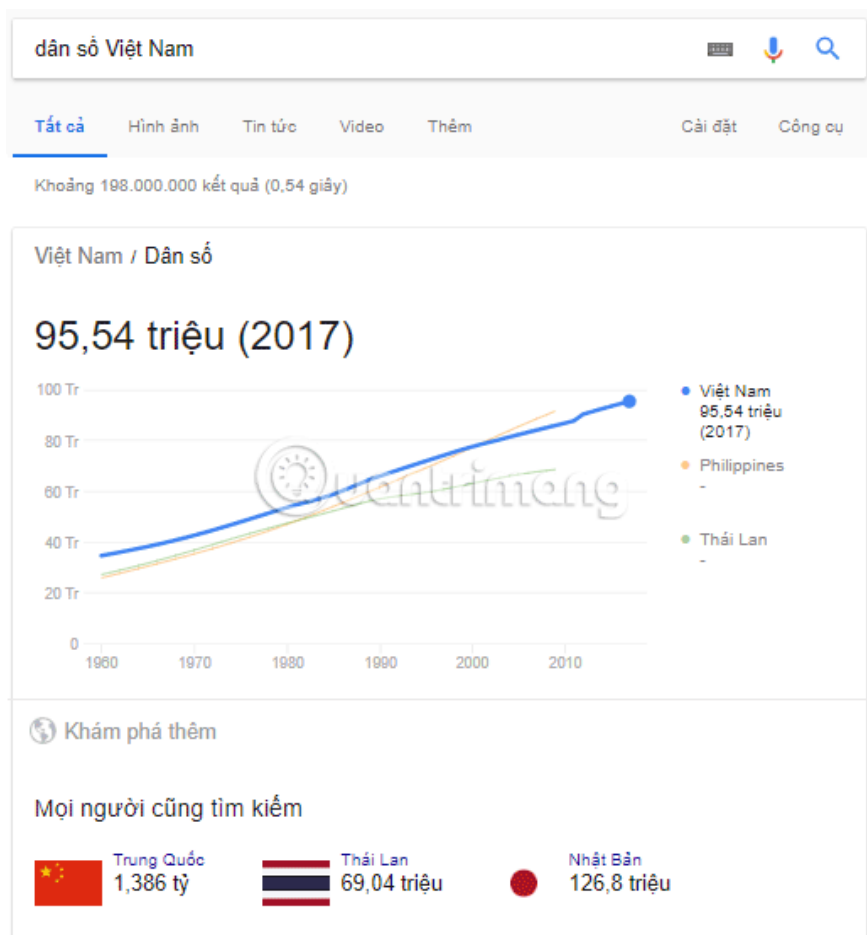

today and 7 days later. However, this search feature only applies to the native Google page (google.com), but not to google.com.

19. Search public data

You can view a variety of data about a specific city or country such as population rate and unemployment rate.

For example, if you want to know the Vietnamese population, you just need to type "**population vietnam**" or "**Vietnamese population**". For cities, try to find the population of Hanoi and Ho Chi Minh City in this way, Google only has data for 2015 of Hanoi and 2017 of the City. HCM.

20. Hours of sunrise / sunset

You can also see the sunrise or sunset time for a specific location, by typing " *sunrise and place* " or " *sunset and location* ", for example " *sunrise hanoi* ", you can also type in Vietnamese : **Hanoi sunrise , the sun sets Hanoi** .

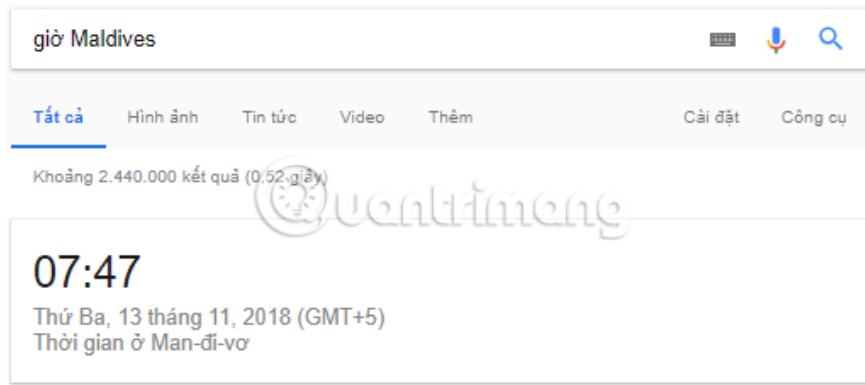

The image shows two screenshots of Google search results. The first screenshot is for the search query "mặt trời mọc Paris". The search bar contains the text "mặt trời mọc Paris" and has icons for keyboard, voice search, and search. Below the search bar are tabs for "Tất cả", "Hình ảnh", "Tin tức", "Video", "Thêm", "Cài đặt", and "Công cụ". The results show "Khoảng 527.000 kết quả (0,54 giây)" and a large display of "07:56". Below the time, it says "Thứ Ba, 13 tháng 11, 2018 (GMT+1)" and "Bình minh ở Pa ri, Pháp". The second screenshot is for the search query "mặt trời lặn Hà Nội". The search bar contains "mặt trời lặn Hà Nội" and has the same icons. Below the search bar are the same tabs. The results show "Khoảng 7.200.000 kết quả (0,48 giây)" and a large display of "17:16". Below the time, it says "Thứ Ba, 13 tháng 11, 2018 (GMT+7)" and "Hoàng hôn ở Hà Nội, Hoàn Kiếm, Hà Nội". Both screenshots have a "QuantiMong" watermark.

Just as with weather search, if you type " *sunrise* " / " *sunset* " without typing the location, Google will return the result of the sunrise / sunset time at where you are.

21. See the current time in a specific location

To see the current time of a place, type " *hour + location* " - for example, what time it is now to see Hanoi time, type " *Hanoi time* ", to see Paris time, tap **Paris time** , see the current time in Maldives, you enter the **Maldives hours** .

The image shows a screenshot of Google search results for the search query "giờ Paris". The search bar contains the text "giờ Paris" and has icons for keyboard, voice search, and search. Below the search bar are tabs for "Tất cả", "Hình ảnh", "Tin tức", "Video", "Thêm", "Cài đặt", and "Công cụ". The results show "Khoảng 20.100.000 kết quả (0,54 giây)" and a large display of "03:46". Below the time, it says "Thứ Ba, 13 tháng 11, 2018 (GMT+1)" and "Thời gian ở Pa ri, Pháp". The screenshot has a "QuantiMong" watermark.

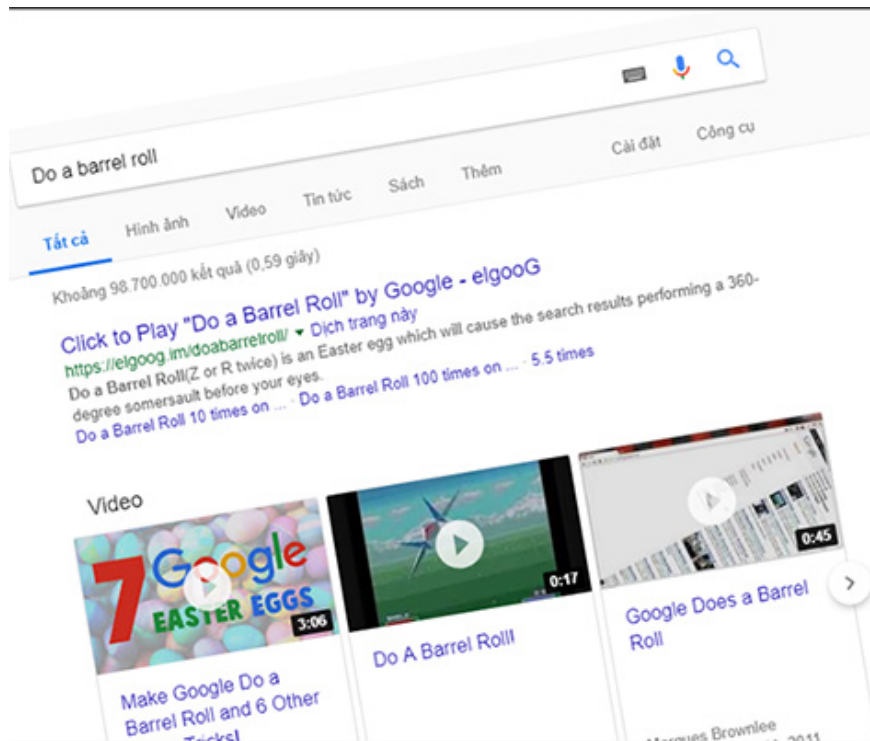

And similarly, just typing "time" or Google **time** will tell you the time at where you live.

23. Do a barrel roll

Type the phrase "**Do a barrel roll**" into the Google search box, press **Enter** and your computer screen will spin and flip. The same thing happens when you search for the keyword "**Z or R twice**". Written in HTML5, the effect does not work in all browsers. Firefox and Chrome seem to be the best browsers that support this naughty game.

So the "**Do a barrel roll**" keyword on Google has been a hot topic for netizens. This continues to be a fascinating "Easter Egg" by Google. In addition, Google has many games that can be played while searching, you need to relax a bit when stress can also try playing them.

24. Watch movie showtimes on Google

You can view the schedule of a specific movie in your locality or other locality right from Google Search, by entering the keyword: **movie showtimes + movie name + location** , as the example below:

The image shows two screenshots of Google search results for movie showtimes. The first screenshot is for the movie "Người bất tử" in Hanoi, showing showtimes at Lotte Cinema, CGV MIPEC Tower, and CGV Hồ Gươm Plaza. The second screenshot is for the same movie in Ho Chi Minh City, showing showtimes at CGV Pandora City, CGV Celadon Tân Phú, and CGV CT Plaza. Both screenshots include navigation tabs for "Tất cả", "Tin tức", "Hình ảnh", "Video", and "Thêm", along with "Cài đặt" and "Công cụ" options. The search results are organized by time of day: "Hôm nay", "Ngày mai", and "Th 5, 15 thg 11".
