

# The father of Pi Network Nicolas Kokkalis mysteriously disappeared like the father of Bitcoin

The founder of Pi Network has been absent from the company for a long time and recently resigned. Many Pi players feel that Nicolas Kokkalis's absence is a big mystery and this has sparked many speculations that are spreading across social networks.

Launched in 2019 and having its first internal transaction in 2020, Pi Network is a cryptocurrency platform based on blockchain technology developed by Stanford PhDs Nicolas Kokkalis.

Pi Network is a cryptocurrency specifically designed for mobile devices that can be mined easily without consuming much energy through the Stellar consensus protocol. In addition, another outstanding advantage of Pi is that it can mine coins every 24 hours even if the application is turned off or the network is turned off.

Before Pi Network's Mainnet went live, Pi players mined large amounts of tokens in the hope of making money after being able to sell them. This trend continues to this day, and the Pi team ensures that there will be regular announcements about the network and Pi Coin.

The founder of Pi Network has been absent from the company for a long time and recently resigned. Some people are even guessing whether Nicolas Kokkalis is alive or dead.

Many individuals have debated the validity of Pi Network after the content of this software was published. Some people are asking for Pi Network verification while others do not trust the project.

So far, the Pi Network team has not made any statements about Kokkalis. This situation has caused the Pi players to become worried and afraid. The question of why Dr. Nicolas Kokkalis is 'missing' makes many people think of the story of Bitcoin founder Satoshi Nakamoto.

Following philanthropy in 2008 and the release of the Bitcoin whitepaper the same year, Bitcoin was released just a year later in 2019. By 2010, Bitcoin had attracted the attention of mainstream media as the public begin to recognize and use it.

Finally, around 2012, after a long period of silence, Satoshi Nakamoto announced that it was time for him to focus on other things. Now, almost a decade later, Satoshi Nakamoto remains a mystery and no one really knows his identity. Many people have linked that story to the case of the disappearance of Nicolas Kokkalis.

However, many people think that this may just be a coincidence and that Dr. Kokkalis may be doing some form of marketing or preparing for the launch of Pi Network on June 28.
