

The FBI successfully cracked an iPhone 11 Pro Max

When investigating a case in late 2019, among the items the FBI seized was an iPhone 11 Pro Max. According to the report, the FBI successfully cracked that 11 Pro Max without the help of Apple.

When investigating a case in late 2019, among the items the FBI seized was an iPhone 11 Pro Max. According to the report, the FBI successfully cracked that 11 Pro Max without the help of Apple.

According to lawyer Ameer Mabjish, Baris Ali Koch - owner of the iPhone 11 Pro Max does not provide a password and is not forced to unlock with Face ID. The FBI used a third-party device called GrayKey to crack and retrieve data from the iPhone 11 Pro Max.

GrayKey, Grayshift's iPhone cracking device.

GrayKey is a special device that can unlock any iPhone manufactured by the company Grayshift. Since 2018, this device has been sold with law enforcement agencies for investigation.

However, just last week, the FBI, even the Justice Department and President Donald Trump, asked Apple to assist in unlocking the shooters' iPhone 5 and iPhone 7 in December 2019. But Apple refused.

The puzzling thing is why the FBI is 'giving up' before iPhone 5 and iPhone 7 when it is possible to crack iPhone 11 Pro Max.

Many believe that this is a conspiracy theory, the Department of Justice and President Donald Trump want to create a backdoor with access to all other Apple devices.

But there is another opinion that the FBI and the Justice Department cannot crack iPhone 5 and iPhone 7 is real.

Perhaps, the GrayKey device cannot crack old iPhones with older iOS versions but only new iPhones with high iOS operating systems. The iPhone 5 and iPhone 7 are old iPhones.

Whatever the reason, Apple will certainly not yield to the FBI in this regard.

1. Scientists have created the world's first unbreakable encryption chip, including quantum computers
2. Successfully breaking iCloud on iPhone with checkra1n tool
