The new Series 5 Ultra retains the lightweight and lightweight design of the previous generation, which uses Intel's processor chip and costs from 19.9 million.

After the 5th Series sold earlier this year, Samsung continued to bring to the market an upgrade version with the price from VND 19.9 million for 13-inch screens and VND 23.9 million for 14-inch screens. This is one of the first laptops running Ivy Bridge chips in the domestic market.

Samsung's new machine is equipped with a powerful configuration with HDD capacity up to 750GB with 24GB SSD, Intel Core i5 3317U processor, 4GB RAM memory can be upgraded to 8GB. In particular, 14-inch version is also equipped with optical drive and discrete graphics Nvidia GeForce GT 620M Graphics rarely seen on ultrabook. In addition, the upgraded Series 5 is notable for its quick boot, taking only 2 seconds to recover from 'Sleep' and 7 seconds from 'Hibernate' status.

Samsung said that the new product will target businessmen and offices, especially those who have a habit of frequently moving. The new Samsung Series 5 Ultra keeps the ultra-slim and compact design with a silver-gray cover. Although light and thin, the metal frame of the device still feels solid when held in hand.

The device uses SuperBright 300nit LED HD anti-glare LED display, this technology ensures detailed and sharp visibility in many different lighting conditions.
