

# The first robot in the world graduated from human university

After studying and studying, a robot called Bina48 passed the graduation exam and received a bachelor's degree at the University of Notre Dame de Namur (NDNU) in Belmont, California, USA.

After studying and studying, a robot called Bina48 passed the graduation exam and received a bachelor's degree at the University of Notre Dame de Namur (NDNU) in Belmont, California, USA. This is the first robot in the world to graduate from a human university.

During the lecture to protect his graduation project, Bina48 also surprised many people by the rhetorical content about very complex topics in human social life such as philosophy, love and problems. moral threads

Bina48 Robot in the defense of his graduation project.

Martine Rothblatt, a technology entrepreneur, was inspired by his wife, Bina Aspen, to create the Bina48 robot. This robot only has head and chest, it can listen, look and talk to people.

Artificial intelligence inside the robot is also a "copy" of Bina Aspen. By creating a database of memories, beliefs and thoughts from social media, Bina Aspen's blog, Bina48 robot shares her ideas and personalities.

Professor William Barry, lecturer of the class that Bina48 robot participates as a student observes the achievement of this robot is amazing. He said: "*Bina48 is the first robot with a high social level to complete a university course. If humans approach artificial intelligence with the sense of dignity and holiness of life, we will produce robots with those values.*"
