

The first set of books about hackers and network information security in Vietnam is coming soon

For the first time in Vietnam, Alpha Books and its partners CMC, NetNam, SecurityBox and CyRadar will release the book 'Information security in a digital age' to bring to readers, businesses and organizations. Basic knowledge of data security.

For the first time in Vietnam, Alpha Books and its partners CMC, NetNam, SecurityBox and CyRadar will release the book "Information security in a digital age" to bring to readers, businesses and organizations. Basic knowledge of data security.

This set of 4 books, 'Spy Network', 'Hidden Art', 'Online Ghosts' and 'History Hackers' will be introduced in mid-January 2019.

This useful set of books not only helps readers better understand the world of black hat hackers, white hats, and the future of technology but also provides practical guidelines to help readers know how to protect information and assets. my network.

More information about books from the fanpage of CMC said:

1. **'Hidden Art'** written by the author #Kevin_Mitnick - one of the most famous cyber criminals in the world, who was named 'the most sought-after hacker', after being imprisoned and released from prison, he has become a network security advisor for many companies around the world. In this book, Kevin Mitnick has shared a lot about whether a password can be cracked, someone is reading your email, no coding means an opening, you can't escape the monitoring and supervision. of the internet . The whole book

highlights security issues and - which is becoming increasingly important for businesses, organizations, governments and internet users.

In the preface to the book "**Hidden Art**", Mr. Nguyen Trung Chinh affirmed:

The book provides a lot of tips, effective ways to protect the user's personal information when operating on the internet and also very intuitive examples of dangers or forms of information collection. Personal information of many organizations. I firmly believe that after reading the book, readers will have a different perspective on protecting their personal information when using services or participating in connecting and sharing on the Internet environment.

In recent times, hackers have frequently taken advantage of user loopholes as well as system vulnerabilities to attack Vietnamese businesses and users, causing many important information to be leaked and compromised. lost, affecting both physical and mental.

In particular, with the explosion of the industrial revolution 4.0 worldwide, including Vietnam and of IoT devices, the potential risk of cyber-attacks will appear more and more. .

Therefore, the book "Information security in a digital age" is expected to help raise awareness of people and businesses about information security. Since then, contributing to the economy of the country increasingly sustainable and healthy development.

Currently 3 hidden art, Ghosts on the Internet and Spy Network have been sold on Tiki at the original price of 230k, the price is reduced to 161k. Interested readers can purchase the experience.
