

The fundamental mistakes when using iPhone make it faster and faster

Apple experts believe that users of iPhone charging overnight, not using genuine charger or having the habit of turning off applications in multitasking is wrong.

The old grandparents had the sentence of 'perseverance in people'. This statement is indeed not wrong, especially in this situation. The habits and the use of the phone seem to be the wrong way, but it is the reason why your iPhone becomes faster than ever. It is worth mentioning, this is almost an error not uncommon that not all iPhone users know to avoid. Let's fix these mistakes right away so your 'mobile phone' is as healthy as the first day of beating the box!

1. 20 tips for using iPhone you should belong to
2. How many tricks have you missed using this iPhone?
3. Home button disappears knowing how to use iPhone X?

1. Use charger of unknown origin

Most new phones purchased will also be equipped with a genuine charger and headset. But for some reason, you lose that charger and at that time many people often go to the shop to buy me a temporary temporary charger. But do you know that non-genuine chargers can bring incalculable dangers? In addition to bad impact on batteries, making battery bottles, poor quality chargers make it easy for your phone to explode. So never regret money 'but choose yourself with low quality devices, it can be dangerous for you and your device at any time.

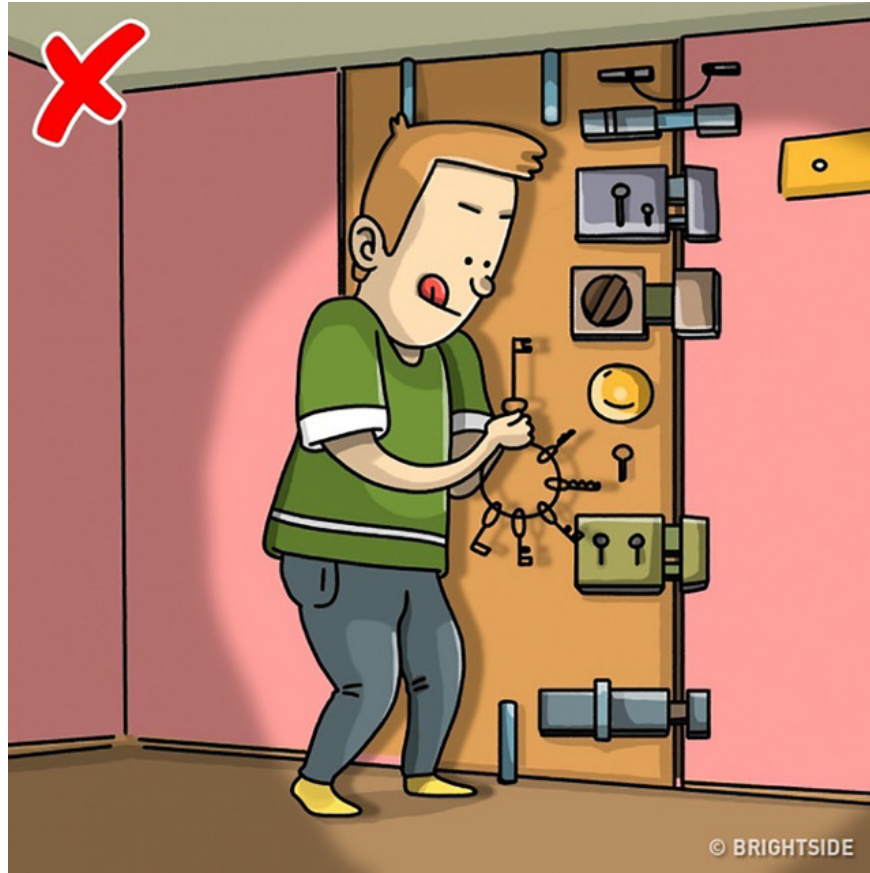

2. Charge the battery overnight

1. We have been charging the wrong way for a long time

This is probably the most controversial topic, because many people believe that with Apple's new charging technology, the device will automatically stop charging when fully charged. However, nothing is certain, so Apple also recommends that users should use the device before fully filling 100% for the best results, in which the battery level from 20% to 80% for the most efficient operation. .

3. Turn off multitasking application

Many people often think that, when charging the battery should turn off all multitasking applications to save battery power for the iphone as well as help the charging work become faster. However, this concept is misleading because after you turn off the application and reopen it, they will lose more space to restart from the beginning. Therefore, you only turn off the application if you no longer need to use it during the day. Also for applications that use regularly like facebook, zalo, . then do not turn on and off continuously only consume battery power and capacity only.

4. The loose back cover does not cover the connection port

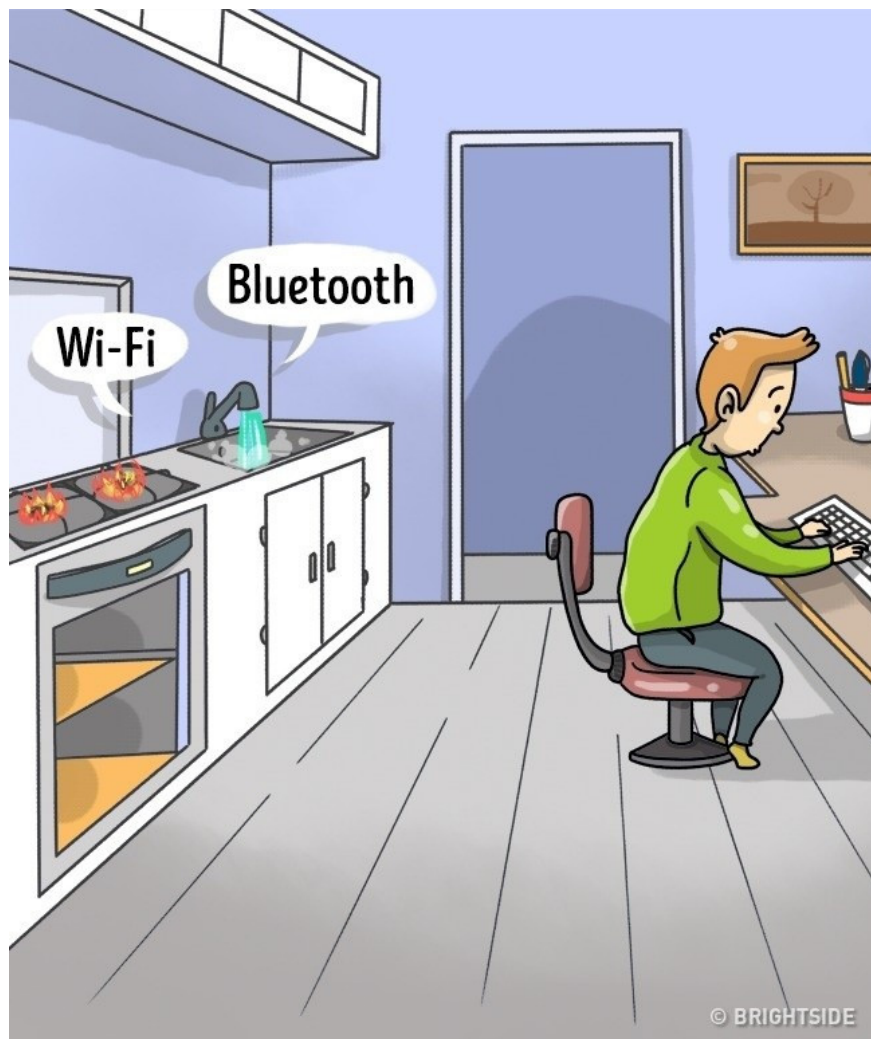

The back cover is an indispensable accessory for your 'mobile phone', and today most of us often choose the back cover with available space in the charging port or headset to facilitate the use. . However, this inadvertently makes your devices more susceptible to dust and dirt, which can quickly deteriorate. Therefore, the experts recommend that users should use the cover to cover these holes, which will be better for the phone. Although it is inconvenient at times to plug in the charger, it will be protected by the external effects such as water or dirt accidentally flying into the charging slot to make your device more durable. In addition, it is better to choose thin and airy back cover for your phone.

5. Use your phone in extremely hot or cold weather

Phones as well as human body heat, they will also work better when in a suitable environment from 32°F to 95°F (0 degrees C - 35 degrees C). So if you are in an environment that is too hot or too cold, limit the use of your phone if you do not want them to be damaged. When the weather is cold, it is advisable to limit the phone out of the bag, and if it is too hot, it is advisable to limit the use of the phone for too long, which can increase the heat, causing the phone to fail faster.

6. Turn on wifi and bluetooth anywhere anytime

Many people often open wifi and bluetooth automatically anytime, anywhere, this accidentally consumes a small amount of battery. Experts consider this action as opening a faucet but not washing dishes or turning on gas cookers but not cooking anything. In addition, this habit not only causes battery consumption but also reduces the life and durability of the device. So remember to turn off wifi and bluetooth when there's no need to use it to better protect your device.

7. Let the phone run out of battery for too long

The phone battery may be damaged if you let it run out for a long time and is not used often. Therefore, if you have 2 phones, you should use them in parallel but don't throw them away and think that giving it a rest for a while is okay. However, after a period of power off and depleting the battery, the phone may fail completely and cannot be used again.

8. Allow too many applications to send notifications

If you always open features that notify all applications that are on your smartphone it will be very annoying. Because these messages appear continuously not only makes your phone run out of battery, but also affect your life as well as those around you. Meanwhile, most of those announcements are almost unnecessary and not too important. Therefore, you should check your applications, which ones are important to inform, otherwise turn it off to protect your device and avoid unnecessary noise.

9. Always turn on location services

Turning on the locator is one of the reasons that battery life becomes fast. Meanwhile, this feature is very little used by people, but many people just turn it on and let it consume a large amount of battery that causes waste. Therefore, you should go to Settings> choose Security> Location Services and turn off location to save battery and improve the life of the device. And when you need to use it, it will not be late to turn it on.

10. Do not restart the phone

Sometimes your phone will fall into a slow state like a turtle, sometimes even stalling. When you encounter this situation, it may be because you used too much machine without giving him time to rest. When you encounter

this situation, you should turn off the power and restart the computer, then it will solve the problem quickly. Besides, for iPhone, Apple support staff also recommend that we start the phone once a week so that iPhone works faster and faster.

Having fun!
