

The giant robot war between the US and Japan will take place on October 18

The dramatic battle between two giant robots of the US and Japan will be held on the morning of October 18 after two years of delay.

The dramatic battle between two giant robots of the US and Japan will be held on the morning of October 18 after two years of delay.

1. More than 1,000 collective dancing robots break the world record in China
2. Artificial muscles can lift things 1,000 times, 3 times stronger than natural muscles
3. Primer - Super transform robot like Transformer

The robot from the US is a metal monster weighing 12 tons and 4.9 meters high called Eagle Prime. This robot has two seats, powered by a 430 horsepower LS3 V8 engine. MegaBots company spent 2.5 million USD to produce Eagle Prime.

Eagle Prime robot shows off its talent. Video: YouTube.

In the video, we can see that the Eagle Prime robot looks quite imposing and possesses tremendous power. It can easily break up a few barrels with just the right hook with the left hand like a claw. Even Eagle Prime can shoot accurate bullets at several other barrels and tear the opponent's face fully equipped with modern equipment.

The robot representing Japan is Kuratas, weighing 6.5 tons and nearly 4m high, manufactured by Suidobashi.

In July 2015, the MegaBots engineering team challenged Japanese rival Suidobashi to participate in a competition between two giant robots. But due to difficulties in locating and upgrading robots, the match was postponed.

On the morning of October 18, the match between two giant robots will take place. The form of competition does not count but see which side was defeated. Robots can use strength, size, weight and weapons to attack or disable opponents, causing opponents to surrender. Weapons used in the match can only damage, distort, distort, and are not capable of cutting through metal.
