

The GitHub app for iOS and Android is officially launched.

Finally, GitHub has officially announced the launch of the GitHub mobile version for iOS and Android devices.

After days of waiting, GitHub finally officially announced the launch of the GitHub mobile version for iOS and Android devices. With the launch of this convenient application, users can fully view the code, merge all changes and share feedback from anytime and anywhere with just a small smartphone. because you have to go to the GitHub website like before. As a forum with a large and stable user base, GitHub should have a mobile application version for a long time!

The GitHub mobile version is built as a native app, so it can automatically adapt to different screen sizes, even with a dark background mode based on your system settings. The system is being applied on the device. The GitHub mobile app is now available as a beta version for iOS and the Android version will be released in the next few days. You can sign up to try GitHub Mobile here.

In addition to information about the GitHub application for mobile devices, GitHub today also released a number of major announcements about the general availability of GitHub Actions and Packages, but changes in the interface of notifications, experiences. new search, new code navigation methods on GitHub, and 2 options for distributing teamwork and many other notable changes

GitHub is the world's largest open source software repository. In addition to acting as an open source project storage space, GitHub is also a place for programmers and ordinary users around the world to report bugs, suggest features and submit closed comments. Their own contributions to open source projects that interest

them.

GitHub is not a project management tool, but programmers rely heavily on this platform to organize their work. With the launch of the application, everything will become much simpler and more handy, that's for sure!
