

The Google home page on mobile has changed, no longer just a search engine, but also many other interesting things

Google recently decided to change its search homepage interface on mobile platforms. With this change for the first time, the Google homepage will integrate personalized feeds according to your login account, not just a search engine.

Google recently decided to change its search homepage interface on mobile platforms. With this change for the first time, the Google homepage will integrate personalized feeds according to your login account, not just a search engine.

Based on the user's interests, habits and browsing history, Google will choose the right content for them, from news, articles to YouTube videos .

Google integrates personalized feeds according to the user's login account.

Previously, Google used to bring this feature to users via Google now application and this time 'Giants' decided to bring them all to mobile web interface. This makes it easier for users of both iOS and Android to access content than to access the Google Now app. Google added that the company will put these content on a computer browser in the future.

More content will be displayed on Google's search homepage.

Users can adjust the content displayed on the Google homepage, press the track of new favorites, remove unwanted topics and hide inappropriate sources.

Users can customize the source.

So far, Google's home page still only searches and accesses a number of Google hits. But after the change, below the search engine will display more rich content. It can be considered as the News Feed of Google, which helps it compete with Facebook and other news platforms.
