

The greatest frog father on the planet, swallowing tadpoles emitting a frog frog

In order to ensure tadpoles grow well, avoid all threats outside, Darwin frogs brought eggs and raised tadpoles in the negative pocket near the abdomen that acts like an incubator.

In order to ensure tadpoles grow well, avoid all threats outside, Darwin frogs brought eggs and raised tadpoles in the negative pocket near the abdomen that acts like an incubator.

1. The ancient demon toad with 2,200 newton biting force, kills the dinosaur with a bite
2. New experiment: Aggressive, aggressive Panama red frogs are more than green frogs
3. What horrible thing will happen to the Earth if the frogs become extinct?

After about 60 days later, when the tadpole developed into a complete baby frog, the frog frog squeezed the incubator bag and pushed them out from the mouth. At that time, my father's frogs will drop baby frogs into a stream so they start living independently.

Undoubtedly, male Darwin frog is the greatest father on the planet.
