

# The guy turned the Audi S7 into a hugely configurable mobile PC that can be played anywhere

With great love for games and computer components, Dong Kuo guy, nicknamed Brother NV, recently assembled himself a computer set in a way that no one would have expected.

With great interest for games and computer components, Dong Kuo, nicknamed Brother NV, marketing director of JD.com e-commerce service in China recently assembled himself. Give me a set of computers in a way that no one would have expected.

The computer set of this guy owns a very terrible configuration including: Intel Core i9 7900x processor, two GTX 1080Ti graphics cards, Asus ROG Swift screen, water cooling system Asus ROG R6E RGB Monoblock .

However, the point that many people think of this desktop layout is in the case and power supply itself. Dong Kuo used his own Audi S7 as the case, and the car's engine was used to make the 2000QW power supply for the machine.

To install this unique moving machine, Dong Kuo had to spend up to \$ 180,000 but in return he could now play PUBG and watch movies even when driving up the mountain. In addition, Kuo's Audi after being installed on the machine also becomes more brilliant and outstanding.
