

# The happy ending: The Instagramer female pair of clouds look the same in all photos invited to develop photo editing apps

The situation is overturned?

About half a month ago, an Instagramer woman named *Martina "Tupi" Saravia* was criticized by netizens for making *identical clouds in all her photos*, even though they were taken at different locations, in different times.

In Saravia's words, she didn't cheat anyone, because she always told 315,000 followers that she used post-production software to edit photos before posting. In a story (Story) on Instagram, she also revealed that she uses the Enlight Quickshot application.

*"There is nothing secret, nothing worth being 'debunked' because I always tell the truth. I even make fun of myself editing my clouds, and saying that This cloud has followed me anywhere in the world. My followers have always supported me, and I think this editing does not affect anyone at all. "*

13.4K people are talking about this 

This story ended with a happy ending, when she recently revealed that she was invited to cooperate with Enlight, the application development company that she used. Stav Tishler, a representative of the company, said: *"We are negotiating with Saravia to create a new exclusive collage. We love her Instagram page and look forward to the good results from this cooperation. . "*

Saravia shared with PEOPLE: *"I am very excited to work with Enlight. Now everyone can put my cloud into all my pictures, just like what I did!"*
