

The harsh truths in photography

Photography is a job that requires passion, talent, and experience to be drawn through photography. Taking photos gives people joy and creativity when expressing their abilities in each photo.

Today, owning a camera is no longer strange to everyone, when we can capture and save ourselves moments of life. However, if you decide to follow the path of taking a more professional photograph, carefully understanding the parameters or techniques of photography, everything is completely different, not simply clicking and shooting normally.

When you first step into the world of photography, you must have prepared for yourself quite a bit of knowledge, and professional photography tools. And in this article, we would like to send you the experience in photography that you should care about.

1. A lot of equipment doesn't help you become a better photographer:

New cameras, new lenses and accessories always give users a lot of excitement, but that's not all to help you get better photos. To be a better photographer, you need to learn more, accessories can support but the rest will depend on you.

Sometimes you will ask yourself, "Is my camera enough?" When the lens and camera you are using cannot have enough light to help you with your photography, the limitations of image size and detail cannot satisfy customers, that's when you need to buy. New camera for yourself.

Remember that a beautiful photo comes from your soul, your heart doesn't come from your wallet.

2. No shortcut:

There is no profession that you can succeed as well as master one way soon. So is photography. Some photography learners are very fast, but some learn very slowly. Not everyone has the same ability, photography is art not a gift package.

Photography is a completely learnable subject. Along with time and ability to practice non-stop. You can learn tips and techniques to interact with light and create impressive works of art. With time, you will definitely realize the difference in your photos and that of other photographers. That is a long process.

So photography has no shortcut, it's a process of working and learning.

3. You need to be patient:

Yes, photography requires each person to be persistent and persistent in order to capture divine moments.

Sometimes you will need to wait until a beautiful day, waiting for the perfect light to produce the best products. There are not always beautiful moments for you. In most cases, unless you're too lucky, you'll need to wait, wait and wait.

The photos you see in magazines and the perfect light are such a perfect time, but they don't always happen. This teaches photographers to better understand patience. Or when you shoot a movie, you can not always click "tap", "tap" continuously like a digital camera because the movies you pay for each photo are much more expensive.

4. Post-production is not all:

Post-production not only appeared in the era of photography. From the past when no photo editing software appeared, the photographers used in the dark room to crop photos and edit some basic information. Now in the digital age we have hundreds of different editing applications from smartphones, tablets and laptops or PCs. Photoshop or Lightroom, it is an indispensable tool to help the perfect image.

But the fact that it is just two photo editing applications, is not something magic that turns unbelievable things into reality. A photo cannot be beautiful if the original photo is not beautiful.

And best of all, don't overdo your photo, it's like a girl with too much makeup.

5. There is nothing wrong with being an amateur photographer:

Being an amateur photographer doesn't mean you're less talented than professional photographers. There is a fact that professional photographers need to spend a lot of time doing their jobs, promoting products, editing with software and paying little attention to the photos they actually use. The photos are mainly for customers, not for themselves. Since then the photos lack passion. Amateur photographers can take whatever they like, whatever they feel makes sense.
