

The human army and the speed-line repair machines are only in 48 hours in Russia

The army of people and machines worked together day and night to repair a main street in the capital Moscow, Russia within 48 hours surprised and admired.

The army of people and machines worked together day and night to repair a main street in the capital Moscow, Russia within 48 hours surprised and admired. After only two days, the urban landscape at the street has been restored.

1. Plastic roads are capable of . self-filling potholes in the Netherlands
2. Traffic works have 1-0-2 in the world
3. Asphalt absorbs more than 11,000 liters of water every hour, running out of flooding

Check out the video below to see how speedy the speed of Russian road workers are.
