

# The idea of ??Macbook Pro equipped with 3D technology

This product is expected to own the latest technologies today, such as touch screen, Core i7 processor and 3-dimensional image display.

**This product is expected to possess the latest technologies today, such as touch screen, Core i7 processor and 3-dimensional image display .**

3D technology is clearly one of the most prominent technology trends in 2010, especially after the launch of "Avatar" Avatar. Therefore, many people hope this unique display technology will appear in the next generation Apple cult product, MacBook Pro.

Still the aluminum frame with unibody design, but designer Tai Chiem has released a MacBook 3D version of the concept with many hardware improvements, trackpads, 3D image display and public support eyeglasses. this technology.

*Here are some pictures of this concept .*

The machine possesses subtle curves and comes with stereoscopic eyeglasses to view 3D images.

# Introducing the revolutionary MacBook 3D

Breaking new ground to design our most advanced MacBook ever  
Coming right at you in three sizes: 13-inch, 15-inch, and 17-inch

## Welcome to the 'Real' World

Our new MacBook 3D is designed to give you the best viewing experience possible. Whether it's work or play enjoy the immersive world of 3D right in the comfort of your own home, or office, or anywhere. Utilizing breakthrough technology, the engineers at Apple have packed an incredible amount into a sliver of a frame. It's our best MacBook ever!

## More Cores, more power

Maximise performance with up to 4 cores using Intel's latest i7 mobile processors enhanced for 3D. Work on multiple applications at lightning speed without ever skipping a beat.

## High Performance Graphics

Specially designed Nvidia graphics card boosts 3D performance when needed and turns itself off when it's not.

## Prolonged power

Every MacBook 3D comes with our new advanced intelligent battery that lasts up to 12 hours (14 hours on the MacBook 3D 17-inch) on a single charge.

## Stereoscopic iSight

Watch 3D, make 3D. In another world first, all MacBook 3D's come with Stereoscopic iSight and a pair of iGlasses so that you can chat to your friends and family in full 3D. This is the same technology used in James Cameron's ground breaking Avatar. Instead of a single lens, stereoscopic cameras uses two lenses to create the perception of depth.

The promised 3D MacBook with powerful Core i7 processor, discrete graphics card Nvidia, long battery life, iSight stereoscopic camera.

**Ports for your pleasure**  
 Make connecting to your portable devices easier with a selection of ports including, MiniDisplay, SD card slot and for the first time ever on our MacBook range, a BluRay burner and USB 3.0.

**Thin is in**  
 Amazingly svelte with gorgeous curves, the MacBook 3D is 20% thinner and 30% lighter making it our most compact MacBook to date.

**A revolutionary evolution**  
 Engineers at Apple believe what's outside is important as what's inside and we've once again taken a giant leap forward in design. Opening the MacBook 3D for the first time, you'll notice the screen glide open with effortless ease. That's because all MacBook 3Ds feature a revolutionary hingeless spine.

Utilizing a space age material called InterTitanium, nano strands of Titanium are interwoven at the microscopic level to form a seamless yet malleable sheet of metallic fabric that's strong and flexible.

**Stunningly beautiful**  
 From the moment you turn on your display be prepared to be dazzled by the sublime color reproduction of our brilliant AMOLED backlit screen that features 1080p in 16:9 aspect ratio. Our MacBooks have never looked this good.

**Perfect from every angle**  
 Touch up photos or watch the latest 3D adventure with exceptional depth and clarity. Less bevel, more screen real estate means you get to enjoy more of your MacBook 3D. With a 50% wider color gamut than previous MacBooks and a 178 degree viewing angle, it's impossible to get a bad view.

**Storage king**  
 Not only is the MacBook 3D our best MacBook to date, it's also the most powerful. Faster processors and graphics cards are just the tip of the iceberg. SSDs (Solid State drives) come standard on all MacBook 3Ds. Starting with 128GB through to 1TB SSD, every file, photo, film, song will be carried with you wherever you go.

The MacBook 3D in the idea of ??Tai Chiem will have a touch screen and use flexible hinges.

**Shaping up quite nicely**  
 Each MacBook 3D is precision designed to perfection
