

The iMAC 2020 concept video of the future of Apple: ravishing!

Apple recently filed a patent for an ambitious design concept related to its all-in-one laptop (iMac) line.

As TipsMake.com reported a few years ago, Apple recently applied for a patent for an ambitious design idea related to the all-in-one laptop line (iMac) of the firm. According to the information described in the patent, both the keyboard and the screen of the device will be integrated into a single curved glass panel for feeling extremely modern and beautiful.

Immediately after being announced, Apple's new iMac design immediately caused a fever not only in the iFan community but also on many technology forums around the world. Simply because it is so beautiful, so impressive, and if such a device is actually released with the commercial version, it will have a huge impact on the global desktop market, contributing to the promotion. A new revolution in computer design style in general, similar to the way foldable smartphones are and will affect the smartphone market in the next few years, especially as models Current designs have proved too boring.

Impressed by the new iMac design, experts from Letgodigital and Concept Creator have collaborated to create a sharp video depicting the iMAC according to the new design in 3-dimensional space. contemplate:

To create this video, experts have to carefully study Apple's patent, the hardest part is to recreate the image of the design from the usual 2D lines into a 3D animated build. like a real product we can touch and manipulate.

The iMac has not had much innovation since its first launch in 1998. That said the new patent will play a very important role in the future of this product line. There is currently no guarantee that such an iMac will be launched, but if it does, after all, users will still be the beneficiaries.
