

The impressive moment when the bullet rushed out of the barrel

Herra Kuulapaa, a Dutch photographer, used a high-speed camera to capture an impressive moment when the bullet left the gun hot.

The bullet flew out of the barrel at 365 m / s. At this rate, our naked eyes cannot see clearly what happens when a bullet is fired.

1. If struck by lightning when flying, is the bullet affected?
2. What horrible thing happens when the body is hit by a bullet?
3. If shot, did you hear the first explosion or hit the previous bullet?

Herra Kuulapaa, a Dutch photographer, used a high-speed camera to capture an impressive moment when the bullet left the gun hot. In the process, a lot of Kuulapaa cameras and lenses were broken due to being placed close to the gun.

Kuulapaa's photos help weapons manufacturers to research projectiles, making weapons more accurate.

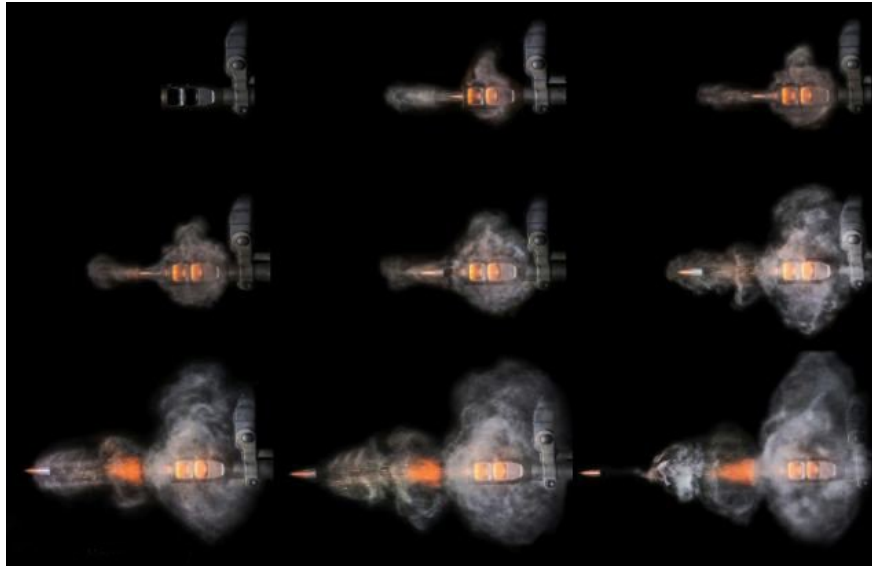

The bullet flew out of the barrel of the Magnum.44 gun. Although the gun was very hot, it was still dubbed the 'world's most powerful pistol'. (Photo: CNA.)
