

The input experience in Windows 10 20H1 update will be significantly better, and this is the reason

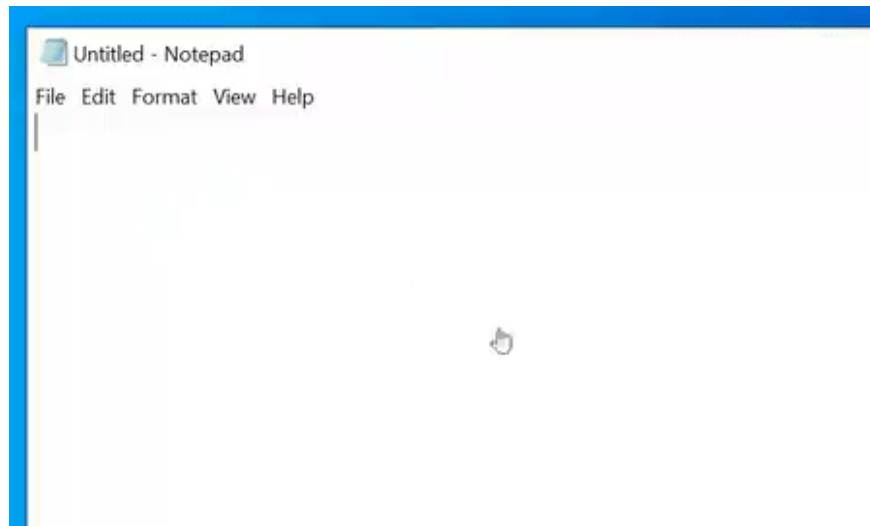

The 20H1 update will also likely focus a lot on the discharge of the input experience in Windows 10.

Windows 10 20H1 will be a relatively large update that Microsoft launched for Windows 10 users this year, with many notable features and improvements. In addition to 'overhauling' the Notification settings, the 20H1 update will likely focus a lot on improving the input experience in Windows 10.

1. Hacker revealed the second Zero-Day, broke Windows' EoP vulnerability patch

Future builds of Windows 10 20H1 will bring new improvements in data entry capabilities by introducing inline text suggestion features on all applications in this operating system. As per the description, while typing on the keyboard, you will see suggestions of word and word suggestions from Microsoft, which will be the words that you most likely will type, just press the Tab key. and word suggestions will be used, so you won't have to waste time typing specific words. In fact, this is not a new feature, it has appeared too popular and has a useful role on mobile input tools, but unfortunately now appears on Windows 10.

1. 3 hidden features will be found in the next version of Windows 10

Microsoft said it has applied artificial intelligence technology to this feature. Of course, asking the AI to give each of the suggestions correctly in any case would be a bit too much, but you can count on the ability to quickly suggest words with high accuracy of the system.

However, this feature is not really new. It is like an update to what Microsoft introduced earlier in 2018 in the Windows 10 April update 2018. At a time more than a year ago, this feature has also begun to be brought to Windows, But all you get is just a textless 'text-based' proposal. At the same time, it only supports operation with the touch keyboard.

1. If you're using Windows 7, Windows XP install the patch for Microsoft BlueKeep immediately

The good news is that in Windows 10 20H1 update, this useful feature will be completely improved. You will not only receive inline text suggestions from Microsoft, but you can also use it with both physical and touch keyboards.
