The longer the list of followers on Instagram, the greater the likelihood of missing out on interesting posts. To avoid this, users can use a feature that allows notifications when a specific account posts new content.

To do this, just:

1. Access the user's profile with updated information that you want to receive notifications.
2. Click on the three dots near the upper right corner of the article.
3. Select the **Turn On Post Notifications option** from the menu.

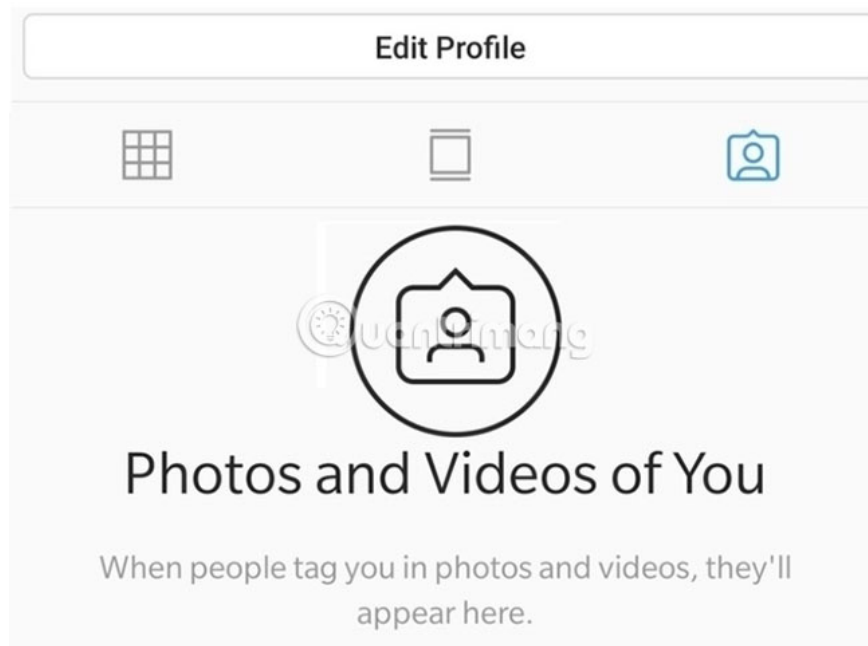

Users can turn off notifications at any time by following the same steps and clicking **Turn Off Post Notifications** at the end. Remember that users will also need to turn on notifications from the Instagram app in the phone settings to make this feature work.

## 11. Pause or ignore Instagram Stories

Users can be extremely creative in how to present Instagram Stories, add slides, videos, text and emoticons to be more effective.

Going through a few stories posted by different people will take a lot of time. However, users can pause an Instagram Stories for as long as they like by pressing and holding the finger down the screen. Users can also skip a story and move on to the next Instagram Stories by swiping left or returning to the previous Instagram Stories by swiping right.

## 12. Remove yourself from posts

Sometimes, you allow people you don't know well to follow you. Then regretted this decision after seeing what they posted.

In addition, it is not possible to undo all friends who occasionally post annoying content. The more friends there are on Instagram, the more opportunities users have to tag in posts that they don't want to link.

Keep asking friends to remove tags that seem rude. Fortunately, Instagram allows users to manually remove their tags from posts and photos:

1. Go to Instagram profile section.
2. Touch the tagged photo icon on the right side of the screen.
3. Users will see a list of photos they are tagged. Click on the image you want to remove the tag.
4. Click on the image to make the username appear.
5. Clicking on the username will take you to the **More Options** menu .
6. Click **Remove Me From Photo** and click on the confirmation box that appears.
